

Test Plan

Plan Name: LTE SMS Test Plan

Plan Id: LTESMS

Version Number: 25

Release Date: February 2025

Latest Release Date: February 2025 : Open Access

0.1 Revision History VZ_TC_LTESMS_1530942203313282	4
2.15 MOBILE TERMINATED SMS MESSAGE- 3GPP SMS VZ_TC_LTESMS_6306	6
2.21 MT 3GPP SMS MESSAGE- VERIFY SIP CALL FLOW VZ_TC_LTESMS_6316	7
2.23 MO 3GPP SMS MESSAGE SIZE MORE THAN 1 SEGMENT OF TEXT VZ_TC_LTESMS_6318	8
2.24 2.24 APPLICATION DIRECTED SMS- OTADM VZ_TC_LTESMS_6319	9
2.25 3GPP TEXT-TO-988 VZ_TC_LTESMS_7349	10
2.26 SMS MESSAGES STORAGE SETTING (DEFAULT) - 3GPP SMS VZ_TC_LTESMS_6320	12
2.28 SMS MESSAGES STORAGE SETTING (MODIFIED) - 3GPP SMS VZ_TC_LTESMS_6321	13
2.30 MO 3GPP SMS RETRY BEHAVIOR-DEFAULT SIP T ₁ , TIMER F AND T ₂ TIMERS VZ_TC_LTESMS_6323	14
2.32 MO 3GPP SMS RETRY BEHAVIOR-MODIFIED SIP T ₁ , TIMER F AND T ₂ TIMERS VZ_TC_LTESMS_6325	16
2.34 MO 3GPP SMS SIP ERRORS VZ_TC_LTESMS_6332	18
2.34.4 Test Procedure - SIP 400 BAD REQUEST VZ_TC_LTESMS_3805059	21
2.34.5 Test Procedure - SIP 404 NOT FOUND VZ_TC_LTESMS_3805067	22
2.34.6 Test Procedure - SIP 500 SERVER INTERNAL ERROR VZ_TC_LTESMS_3805068	23
2.34.7 Test Procedure - SIP 502 BAD GATEWAY VZ_TC_LTESMS_3805076	24
2.34.8 Test Procedure - SIP 503 SERVICE UNAVAILABLE ERROR VZ_TC_LTESMS_3805154	25
2.36 MO 3GPP SMS RETRY BEHAVIOR-DEFAULT SMS STORAGE SETTING VZ_TC_LTESMS_6341	26
2.36.4 Test Procedure - No Response from IMS VZ_TC_LTESMS_3815949	28
2.36.5 Test Procedure - SIP Error from IMS VZ_TC_LTESMS_3815950	29
2.38 MO 3GPP SMS RETRY BEHAVIOR-MODIFIED SMS STORAGE SETTING VZ_TC_LTESMS_6344	30
2.38.4 Test Procedure - No Response from IMS VZ_TC_LTESMS_3816049	32
2.38.5 Test Procedure - SIP Error from IMS VZ_TC_LTESMS_3816053	33
2.39 DEVICE IMS REGISTRATION CONTROL PARAMETERS- DEFAULT VZ_TC_LTESMS_6347	34
2.40 DEVICE IMS REGISTRATION CONTROL PARAMETER- MODIFIED VZ_TC_LTESMS_6348	35
2.40.4 Test Procedure - SMS_Over_IP_Networks_Indication and IMS Test mode are 'disabled' VZ_TC_LTESMS_3816281	38
2.40.5 Test Procedure - SMS_Over_IP_Networks_Indication and IMS Test mode are 'enabled' VZ_TC_LTESMS_3816283	39
2.40.6 Test Procedure - SMS_Over_IP_Networks_Indication and IMS Test mode are 'disable' and 'enable' respectively VZ_TC_LTESMS_3816284	40

2.55 MT 3GPP CONCATENATED SHORT MESSAGE (MORE THAN 1 SEGMENT OF TEXT) VZ_TC_LTESMS_6358	41
2.59 MO 3GPP SMS - MESSAGE STATUS REPORT VZ_TC_LTESMS_6360	42
2.62 MO 3GPP SMS ENCODED USING GSM 7-BIT VZ_TC_LTESMS_6363	43
2.63 MT 3GPP SMS ENCODED USING GSM 7-BIT VZ_TC_LTESMS_6364	44
2.68 MO 3GPP SMS Encoded Using UCS-2(ISOIEC 10646-1) VZ_TC_LTESMS_6369	45
2.69 MT 3GPP SMS Encoded Using UCS-2(ISOIEC 10646-1) VZ_TC_LTESMS_6370	46
2.72 MT SMS Messages storage Function - 3GPP SMS VZ_TC_LTESMS_6373	47
2.73 MT SIM OTA Wake Up SMS After IMS Registration Using the IMSI-based SIP URI VZ_TC_LTESMS_6374	48
2.73.1 MT SIM OTA Wake Up SMS After IMS Registration Using the IMSI-based SIP URI - Test1 VZ_TC_LTESMS_4105999311931763	53
2.73.2 MT SIM OTA Wake Up SMS After IMS Registration Using the IMSI-based SIP URI - Test2 VZ_TC_LTESMS_4105999311931764	54
2.75 DEVICE MO SMS - VERIFY FORMAT SETTING- MODIFIED, SIP MESSAGE Headers, and SIP Call Flow VZ_TC_LTESMS_9562	55
2.76 IPsec Failure Conditions on SMS VZ_TC_LTESMS_4105999311934722	58
2.80 SMS over NAS VZ_TC_LTESMS_3330510	60
2.80.1 Test Procedure - SMS over NAS - GCF 36.523-1_11.1.1 VZ_TC_LTESMS_3817077	61
2.80.2 Test Procedure - SMS over NAS - GCF 36.523-1_11.1.2 VZ_TC_LTESMS_3817086	62

0.1 Revision History VZ_TC_LTESMS_1530942203313282

Version	Description		Release Date
1.0	Initial release		2/11/2010
2.0	Updates/Clarifications/Additions to the following sections: 1.4, 1.5, 4	Verizon Wireless	03/25/2010
3.0	<ul style="list-style-type: none"> Clarification added to test cases 2.1, 2.3 to 2.38. Test 2.2: Device IMS registration-Unauthorized user is void. Added new tests -2.39, 2.39 2.40, 2.41, 2.42, 2.43, 2.44, 2.45, 2.46, 2.47, 2.48, 2.49, 2.50, 2.51, 2.52 and 2.53. 	Verizon Wireless	08/02/2010
4.0	<ul style="list-style-type: none"> Clarification added to test cases 2.43 to 2.50 	Verizon Wireless	10/12/2010
5.0	<ul style="list-style-type: none"> Updates to sections 1.3 and 1.5 Updates to test cases 2.41 and 2.42 	Verizon Wireless	12/17/2010
6.0	<ul style="list-style-type: none"> Updates to test cases 2.22, 2.23, 2.35, 2.37, 2.52 and 2.53 Added new test cases 2.54 2.72 Removed test cases 2.3, 2.4, 2.25, 2.27 	Verizon Wireless	03/31/2011
7.0	<ul style="list-style-type: none"> Updates to test cases 2.1, 2.21, 2.35, 2.36, 2.38, 2.39, 2.40, 2.55 Removed test cases, 2.37, 2.56, 2.57 	Verizon Wireless	12/05/2011
8.0	<ul style="list-style-type: none"> Added test case 2.73 	Verizon Wireless	July 2012
9.0	<ul style="list-style-type: none"> Removed test cases 2.1, 2.5, 2.6, 2.7, 2.8, 2.9, 2.41, 2.43, 2.44, 2.45, 2.46, 2.47, 2.48, 2.49, 2.50, 2.52, 2.53. these test cases are moved to Verizon Wireless LTE IMS Registration and IMS Registration Retry Test Plan Added section in Test environment for IMS registration 	Verizon Wireless	01/23/2013
10.0	<ul style="list-style-type: none"> Updated Test Cases 2.16 and 2.16, verification of P-Access-Network-Info header in SIP MESSAGE method 	Verizon Wireless	01/23/2013
20.0	Added Text-To-988 TC 2.25		Jun 2022

21.0	Retired 3GPP2 test cases: 2.14,2.20,2.22,2.29,2.31,2.33,2.35,2.54,2.64,2.65,2.66,2.67. Updated test cases: 2.39,2.40,2.58,2.60,2.61,2.70,2.71 Updated and Duplicated multiple TCs with extra suffixes for different technology variants.	Verizon Wireless	June 2023
22.0	Retired TCs: 2.58, 2.60, 2.61, 2.70, 2.71 (Invalid for 3GPP)	Verizon Wireless	Oct 2023
23.0	Updated numbering of TC 2.73.x from alphanumeric to numeric	Verizon Wireless	Feb 2024
24.0	Section 2.35 retired	Verizon Wireless	October 2024
25.0	Added IPsec requirements for test platform to support IPsec integrity protection for SIP signaling Added TC 2.76 - IPsec failure conditions on SMS Retired TC 2.51 - DEVICE IMS INTERACTION- IPSEC CONFIDENTIALITY PROTECTION Retired TC 2.33.4 - 2.33.8	Verizon Wireless	February 2025

IPsec Requirements for Test Platform

Refer to LTE IMS Registration and Retry Test Plan (IMSREGRTY) for IPsec requirements for the test platform.

2.15 MOBILE TERMINATED SMS MESSAGE- 3GPP SMS VZ_TC_LTESMS_6306

This test verifies the LTE device functionality for 3GPP SMS formatted mobile-terminated SMS message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier.
Procedures
<ol style="list-style-type: none"> a. Using Test platform, confirm that DUT is in idle state i.e. no traffic channel is up. b. Send a 3GPP formatted SMS message from Test platform to DUT. a. Using Test platform, verify that DUT successfully received the SMS text message sent at step b.
Expected Results
The LTE device successfully receives 3GPP formatted SMS messages over IMS

2.2.1 MT 3GPP SMS MESSAGE- VERIFY SIP CALL FLOW VZ_TC_LTESMS_6316

This test verifies the LTE device SIP call flow for successful mobile-terminated 3GPP SMS message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier.
Procedures
<ol style="list-style-type: none"> Send a 3GPP formatted SMS message from the Test platform to DUT. Using Test platform, verify that DUT received SIP MESSAGE from P-CSCF indicating the MT 3GPP SMS message. Using Test platform, verify that DUT sent SIP 200 OK response message as well as SIP MESSAGE containing Delivery Report to P-CSCF indicating the successful MT SMS delivery.
Expected Results
The LTE device successfully exchanges the SIP messages with P-CSCF for MT 3GPP SMS messages and returns a SIP 200 OK response to the network as well as the Delivery Report.

2.2.3 MO 3GPP SMS MESSAGE SIZE MORE THAN 1 SEGMENT OF TEXT

VZ_TC_LTESMS_6318

This test verifies the LTE device MO 3GPP SMS functionality, when the SMS message size (SMS payload) is more than 1 segment of text (i.e. default one segment SMS message size is 160 characters).

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> The LTE device under test (DUT) must be registered with IMS through LTE carrier. The Test platform shall be EMS supported capable. Using DM tool, configure the DUT SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Compose and send an SMS message with more than 160 characters from DUT to the Test platform. Using Test platform confirm that DUT sent an SMS message as multiple SIP messages (SMSs). <p>Note: The maximum SMS message (SMS payload) size support for single a SMS message is 160 characters (1 segment). Example: If SMS message contains 208 characters, then SMS message will be sent as 2 messages (i.e. First messages contains 160 characters, and second message contains 48 characters).</p> Using Test platform, confirm that SMS message is received successfully from DUT and also confirm that the Test platform indicates that, the received SMS is multi a segment SMS.
Expected Results
The LTE device successfully sends the 3GPP SMS message, when SMS message size (SMS payload) is more than 256 bytes.

2.2.4 APPLICATION DIRECTED SMS- OTADM VZ_TC.LTESMS_6319

This test verifies the interaction between the SMS-Over-IMS application and an application that uses application-directed SMS messages for LTE device.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier.
Procedures
<ol style="list-style-type: none"> 1. Send a WAP SMS for the OTADM client inside the DUT from Network equipment. 2. Verify that the DUT receives the WAP SMS message over the IMS network. 3. Using Test platform, verify that DUT OTADM client successfully wakes up and DUT is ready for OTADM session.
Expected Results
The LTE device correctly responds to the WAP OTADM message.

2.25 3GPP TEXT-TO-988 VZ_TC_LTESMS_7349

This test verifies the LTE device SMS functionality to/from Text-To-988 Service.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment
<p>The LTE device under test (DUT) must be registered with IMS through Live LTE network.</p> <p>Using DM tool, configure DUT SMS format setting parameter "smsformat" to "3GPP".</p>
Procedures
<p>Compose and send an SMS message with less than 160 characters from DUT with [Verizon Text-To-988 certification] tag.</p>
Expected Results
<p>The LTE device successfully sends the SMS message, and received a response message from 988 Suicide Prevention Lifeline.</p>
Design Steps
Step Name

Step 2
Pre-Conditions
Procedures
Compose and send an SMS message with more than 160 characters from DUT with [Verizon Text-To-988 certification] tag.
Expected Results
The LTE device successfully sends the SMS message, and received a response message from 988 Suicide Prevention Lifeline.

2.26 SMS MESSAGES STORAGE SETTING (DEFAULT) - 3GPP SMS

VZ_TC_LTESMS_6320

This test verifies the LTE device default SMS storage setting configuration for MO and MT 3GPP SMS messages.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • This test must be performed on a DUT with the default SMS storage setting. • Using DM tool, configure DUT SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Using DM tool, confirm that the DUT SMS storage setting parameter "smswriteuicc" is "OFF" Send an MO 3GPP SMS message from DUT to the Test platform. Using DUT, confirm that MO 3GPP SMS (i.e. sent SMS) is stored in the device memory location. Send an 3GPP SMS message from Test platform to DUT Using DUT, confirm that the MT 3GPP SMS (i.e. received SMS) is stored in the device memory location.
Expected Results
The LTE device default SMS storage setting parameter "smswriteuicc" values is "OFF" and the MO /MT 3GPP SMS messages shall be stored in the device memory location.

2.28 SMS MESSAGES STORAGE SETTING (MODIFIED) - 3GPP SMS

VZ_TC_LTESMS_6321

This test verifies the LTE device MO and MT 3GPP SMS message storage locations for different device SMS storage setting configurations.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS storage setting parameter "smswriteuicc" to "3GPP".
Procedures
<ol style="list-style-type: none"> Using DM tool, configure the DUT SMS storage setting parameter "smswriteuicc" to "ON". Send 3GPP SMS message from DUT to the Test platform. Using DUT, confirm that the MO 3GPP SMS (i.e. sent SMS) is stored in the device UICC (USIM) card memory location. Send a 3GPP SMS message from Test platform to DUT Using DUT, confirm that the MT 3GPP SMS (i.e. received SMS) is stored in the device UICC (USIM) card memory location Power cycle the DUT and confirm that the value of DUT SMS storage setting parameter "smswriteuicc" is still set to "ON". Using DM tool, change the value of the SMS storage setting parameter "smswriteuicc" is set to "OFF". Send an MO 3GPP SMS message from DUT to the Test platform. Using DUT, confirm that the MO 3GPP SMS (i.e. sent SMS) is stored in the device memory location. Send an 3GPP SMS message from Test platform to DUT Using DUT, confirm that the MT 3GPP SMS (i.e. received SMS) is stored in the device memory location. Power cycle the DUT and confirm that the value of DUT SMS storage setting parameter "smswriteuicc" is still set to "OFF".
Expected Results
<p>The LTE device SMS storage setting parameter "smswriteuicc" is configurable.</p> <p>The LTE device SMS storage setting is persistent across device power cycles.</p> <p>The MO and MT 3GPP SMS messages shall be stored in the device memory, when "smswriteuicc" value is "OFF".</p> <p>The MO and MT 3GPP SMS messages are stored in the device UICC (USIM) memory when "smswriteuicc" is "ON".</p>

2.30 MO 3GPP SMS RETRY BEHAVIOR-DEFAULT SIP T₁, TIMER F AND T₂ TIMERS VZ_TC_LTESMS_6323

This test verifies the LTE device MO 3GPP SMS message retry mechanism for the device default SIP timer values T₁, Timer F and T₂.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • This test must be performed on a DUT with default SIP Timer (i.e. T₁ Timer, Timer F and T₂ Timer) values. • Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> 1. Using DM tool, verify that DUT default SIP T₁ timer parameter "T₁timer_ims" value is 3 seconds. 1. Using DM tool, verify that DUT default SIP Timer F parameter "TFtimer_ims" value is 30 seconds. 2. Using DM tool, verify that the DUT default SIP "T₂ timer" parameter "T₂Timer_ims" value is 16 seconds. 3. Configure P-CSCF (IMS) not to respond for any of the SIP messages from DUT. 4. Attempt to send a 3GPP SMS message from DUT to the Test platform. 5. Using Test platform, verify that DUT sent SIP MESSAGE to P-CSCF and note the timestamp at which DUT sent the SIP MESSAGE. 6. Using Test platform, confirm that DUT retransmitted SIP MESSAGE in the following intervals <ul style="list-style-type: none"> □ Second SIP MESSAGE transmitted after 3 seconds (i.e. after T₁ expires) and subsequently the SIP MESSAGE is transmitted in 6 sec, 12 sec.etc (i.e. T₁ sec, 2*(2*T₁) sec, 2*2*(2*T₁) sec, 2*2*2*(2*T₁) .etc) time interval till the time interval reach to 16 Sec (T₂ Timer). □ After reaching the re-transmission interval to 16 sec (T₂ timer), then the SIP MESSAGE will be re-transmitted after every 16 sec till the sum of the T₁ and T₂ time intervals reaches to

the SIP Timer F expires (i.e. 30 sec).

- The SIP MESSAGE is transmitted for 30 seconds (i.e. till Timer F expiry) in 3 sec, 6 sec, 12 sec, and 16 sec time intervals.

Note: The last SIP MESSAGE re-transmission (i.e. 16 second interval) may not happen, because the total sums of time intervals cross the SIP timer expiry (i.e. 30 sec- Timer F).

7. Using Test platform, confirm that once SIP timer expires (i.e. SIP Timer F) DUT presents SMS message failure indication to the DUT user.

Note: Even if the DUT retransmits SIP MESSAGE in different SIP timer intervals (i.e. till SIP timer F expiry), according to the device user one attempt of MO SMS failure will be considered only after SIP timer F expiry. A second MO SMS attempt will be considered only after the SIP Timer F expires.

Expected Results

The LTE device default SIP "T1", "T2" and "Timer F" timer values are 3 seconds, 16 seconds and 30 seconds respectively and device follows the proper retry logic for MO 3GPP SMS based on the SIP timers.

2.32 MO 3GPP SMS RETRY BEHAVIOR-MODIFIED SIP T₁, TIMER F AND T₂ TIMERS VZ_TC_LTESMS_6325

This test verifies the LTE device MO 3GPP SMS message retry mechanism for the device modified SIP timer T₁, Timer F and T₂ values.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> 1. Using DM tool, change the DUT SIP T₁ timer parameter "T₁timer_ims" value to 2 seconds. 1. Using DM tool, change the DUT SIP Timer F parameter "TFtimer_ims" value to 40 seconds. 2. Using DM tool, change the DUT SIP "T₂ timer" parameter "T₂Timer_ims" value to 8 seconds. 3. Configure P-CSCF (IMS) not to respond for any of the SIP messages from DUT. 4. Attempt to send a 3GPP SMS message from DUT to the Test platform. 5. Using Test platform, verify that DUT sent SIP MESSAGE to P-CSCF and note the timestamp at which DUT sent the SIP MESSAGE. 6. Using Test platform, confirm that DUT retransmitted SIP MESSAGE in the following intervals <ul style="list-style-type: none"> □ Second SIP MESSAGE transmitted after 2 seconds (i.e. after T₁ expires) and subsequently the SIP MESSAGE is transmitted in 4 sec, 8 sec.etc (i.e. T₁ sec, 2*(2*T₁) sec, 2*2*(2*T₁) sec, 2*2*2*(2*T₁) .etc) time interval till the time interval reach to 8 Sec (T₂ Timer). □ After reaching the re-transmission interval to 8 sec (T₂ timer), then the SIP MESSAGE will be re-transmitted after every 8 sec till the sum of the T₁ and T₂ time intervals reaches to the SIP Timer F expires (i.e. 30 sec). □ The SIP MESSAGE is transmitted for 30 seconds (i.e. till Timer F expiry) in 2 sec, 4 sec, 8 sec, 8 sec, 8 sec and 8 sec time intervals.

7. Using Test platform, confirm that once SIP timer expires (i.e. SIP Timer F) DUT presents SMS message failure indication to the DUT user.

Note: Even if the DUT retransmits SIP MESSAGE in different SIP timer intervals (i.e. till SIP timer F expiry), according to the device user one attempt of MO SMS failure will be considered only after SIP timer F expiry. A second MO SMS attempt will be considered only after the SIP Timer F expires.

Expected Results

The LTE device SIP timers "T1", "T2" and "Timer F" are configurable and device follows the proper retry logic for MO 3GPP SMS based on the modified SIP timers.

2.34 MO 3GPP SMS SIP ERRORS VZ_TC_LTESMS_6332

This test verifies the LTE device behavior for MO 3GPP SMS message, when device receives a SIP error from IMS.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
SIP 400 BAD REQUEST
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Configure P-CSCF (IMS) to respond with SIP 400 Bad request error for DUT's SIP MESSAGE. Attempt to send a 3GPP SMS message from DUT to the Test platform. Using Test platform, verify that DUT received the SIP 400 Bad Request error message from P-CSCF for SIP MESSAGE. Using Test platform, confirm that the MO 3GPP SMS message attempt is failed.
Expected Results
The LTE device shall be able to identify the SIP errors.
Design Steps
Step Name
SIP 404 NOT FOUND
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Configure P-CSCF (IMS) to respond with SIP 404 NOT FOUND error for DUT's SIP MESSAGE. Attempt to send a 3GPP SMS message from DUT to the Test platform.

- c. Using Test platform, verify that DUT received the SIP 404 not found error message from P-CSCF for SIP MESSAGE.
- d. Using Test platform, confirm that the MO 3GPP SMS message attempt is failed.

Expected Results

The LTE device shall be able to identify the SIP errors.

Design Steps

Step Name

SIP 500 SERVER INTERNAL ERROR

Pre-Conditions

Test Environment

- The LTE device under test (DUT) must be registered with IMS through LTE carrier.
- Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".

Procedures

- a. Configure P-CSCF (IMS) to respond with SIP 500 SERVER INTERNAL error for DUT's SIP MESSAGE.
- b. Attempt to send a 3GPP SMS message from the DUT to the Test platform.
- c. Using Test platform, verify that DUT received the SIP 500 server internal error message from P-CSCF for SIP MESSAGE.
- d. Using Test platform, confirm that the MO 3GPP SMS message attempt is failed.

Expected Results

The LTE device shall be able to identify the SIP errors.

Design Steps

Step Name

SIP 502 BAD GATEWAY ERROR

Pre-Conditions

Test Environment

- The LTE device under test (DUT) must be registered with IMS through LTE carrier.
- Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".

Procedures

- a. Configure P-CSCF (IMS) to respond with SIP 502 BAD GATEWAY error for DUT's SIP MESSAGE.
- b. Attempt to send a 3GPP SMS message from DUT to the Test platform
- c. Using Test platform, verify that DUT received the SIP 502 Bad gateway error message from P-CSCF for SIP MESSAGE.
- d. Using Test platform, confirm that the MO 3GPP SMS message attempt is failed.

Expected Results
The LTE device shall be able to identify the SIP errors.
Design Steps
Step Name
SIP 503 SERVICE UNAVAILABLE ERROR
Pre-Conditions
Test Environment <ul style="list-style-type: none"> The LTE device under test (DUT) must be registered with IMS through LTE carrier. Using DM tool, configure the DUT SMS storage setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Configure P-CSCF (IMS) to respond with SIP 503 SERVICE UNAVAILABLE error for DUT's SIP MESSAGE. Attempt to send a 3GPP SMS message from DUT to the Test platform. Using Test platform, verify that DUT received the SIP 503 service unavailable error message from P-CSCF for SIP MESSAGE. Using Test platform, confirm that the MO 3GPP SMS message attempt is failed.
Expected Results
The LTE device shall be able to identify the SIP errors.

2.36 MO 3GPP SMS RETRY BEHAVIOR-DEFAULT SMS STORAGE SETTING VZ_TC_LTESMS_6341

This test verifies the LTE device MO 3GPP SMS message retry mechanism, when initial attempt of MO 3GPP SMS message is failed due to SIP error or SIP timer expiration and this test also verifies the SMS message storage location.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
No response from IMS
Pre-Conditions
Test Environment <ul style="list-style-type: none"> The LTE device under test (DUT) must be registered with IMS through LTE carrier. This test must be performed on device with default SMS storage setting. Using DM tool, configure the DUT MO SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Using DM tools, confirm that SMS storage setting parameter "smswriteuicc" is "OFF". Configure P-CSCF (IMS) not to respond for SIP MESSAGE from DUT. Attempt to send a 3GPP SMS message from DUT to the Test platform. Execute Test: "MO 3GPP SMS RETRY BEHAVIOR-DEFAULT SIP T₁, TIMER F AND T₂ TIMERS" or Test: "MO 3GPP SMS RETRY BEHAVIOR-MODIFIED SIP T₁, TIMER F AND T₂ TIMERS" test procedure for SMS attempt failure and also note the time stamp of initial SMS attempt failure. Using Test platform, confirm that the DUT re-attempted (second attempt) to send 3GPP SMS to Test platform exactly after 30 sec of the first attempt SMS failure. Verify that the message in the second attempt has TP-Reject-Duplicates (TP-RD) bit set to 1 and it includes the same value for TP-Message-Reference (TP-MR) as the message in the initial attempt. Verify that the second attempt of 3GPP SMS is also failed due to IMS configuration at Step-b. Verify that the failed MO 3GPP SMS message is stored in the device memory with status set to fail.
Expected Results
The LTE device follows the appropriate retry logic for MO 3GPP SMS and the sent MO 3GPP SMS message shall be stored in the memory location with the proper status indication (failed/Pass). In the second attempt, device sets TP-Reject-Duplicates (TP-RD) bit to 1 and the TP-Message-Reference (TP-MR) value is the same as the one in the initial attempt.
Design Steps
Step Name

SIP error from IMS

Pre-Conditions

Test Environment

- The LTE device under test (DUT) must be registered with IMS through LTE carrier.
- This test must be performed on device with default SMS storage setting.
- Using DM tool, configure the DUT MO SMS format setting parameter "smsformat" to "3GPP".

Procedures

- Using DM tool, confirm that SMS storage setting parameter "smswriteuicc" is "OFF".
- Configure P-CSCF (IMS) to respond with SIP error for DUT's SIP MESSAGE.
NOTE: Refer **Test:** "MO 3GPP SMS-SIP errors" for different SIP errors.
- Attempt to send a 3GPP SMS message from DUT to the Test platform.
- Execute **Test:** "MO 3GPP SMS SIP ERRORS" test procedure for SMS attempt failure and also note the time stamp of initial SMS attempt failure.
- Using Test platform, confirm that the DUT re-attempted (second attempt) to send 3GPP SMS to Test platform exactly after 30 sec of the first attempt SMS failure.
- Verify that the message in the second attempt has TP-Reject-Duplicates (TP-RD) bit set to 1 and it includes the same value for TP-Message-Reference (TP-MR) as the message in the initial attempt.
- Verify that the second attempt of 3GPP SMS is also failed due to IMS configuration at **Step-b**.
- Verify that the failed MO 3GPP SMS message is stored in the memory with status set to fail.

Expected Results

The LTE device follows the appropriate retry logic for MO 3GPP SMS and the sent MO 3GPP SMS message shall be stored in the memory location with the proper status indication (failed/Pass). In the second attempt, device sets TP-Reject-Duplicates (TP-RD) bit to 1 and the TP-Message-Reference (TP-MR) value is the same as the one in the initial attempt.

2.39 DEVICE IMS REGISTRATION CONTROL PARAMETERS- DEFAULT

VZ_TC_LTESMS_6347

This test verifies the LTE device IMS registration functionality impact on the device default IMS registration control parameter settings.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be power off mode. • This test must be performed on a device with default settings
Procedures
<ol style="list-style-type: none"> Using DM tool, confirm that DUT default SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value is "1". Using DM tool, confirm that DUT default IMS Test mode control parameter is "disabled". Execute Test: "Device Initial MSISDN-based IMS Registration" Test procedure for successful device IMS registration. Execute Tests: "Mobile Originated SMS message- 3GPP SMS", and " Mobile Terminated SMS message- 3GPP SMS" Verify that the DUT successfully sends/receives SMS (3gpp/3gpp2) over IMS.
Expected Results
<p>The LTE device successfully performs IMS registration with the default device IMS registration control parameter settings.</p> <p>The LTE device default SMS over IMS control setting parameter "SMS_Over_IP_Networks_Indication" value is "1" and IMS Test mode control parameter is "disable".</p> <p>With default values of "SMS_Over_IP_Networks_Indication" and IMS Test mode control parameter, LTE device successfully sends MO SMS (3gpp/3gpp2) and receives MT SMS (3gpp/3gpp2) over IMS.</p>

2.4o DEVICE IMS REGISTRATION CONTROL PARAMETER- MODIFIED

VZ.TC.LTESMS_6348

This test verifies the LTE device IMS registration functionality for different IMS registration control parameter settings.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
SMS_over_IP_Networks_Indication and IMS Test mode are disable and enable respectively
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be power off mode. • This test must be performed on a device with default settings. • Using DM tool, confirm that the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value is "1". • Using DM tool, confirm that the DUT IMS Test mode control parameter is "disable".
Procedures
<ol style="list-style-type: none"> Using DM tool, configure the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value to "o". Using DM tool, configure the DUT IMS Test mode control parameter to "enable". Power up the DUT Using Test platform, confirm that DUT is not attempted to IMS registration and is only attached to LTE network. Execute Tests: "Mobile Originated SMS message- 3GPP SMS", " and " Mobile Terminated SMS message- 3GPP SMS" Verify that, since DUT is in IMS Test mode operation, SMS origination and termination over IMS is disabled (DUT does not perform IMS registration) Power cycle the DUT and using DM tool, confirm the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" and IMS Test mode control parameter are still set to "o" and "enable" respectively
Expected Results
<p>The LTE device IMS registration control setting parameters can be configurable and the configured setting parameters are persistent across device power cycles.</p> <p>The LTE device IMS registration attempt depends on the IMS registration control setting parameters:</p> <ul style="list-style-type: none"> • LTE device does not perform IMS registration if IMS Test mode is enabled and SMS origination/termination over IMS is disabled • LTE device performs IMS registration if both IMS test mode and "SMS_Over_IP_Networks_Indication" are disabled, receives MT SMS sent over IMS, but does not send any MO SMS over IMS
Design Steps

Step Name
SMS_Over_IP_Networks_Indication and IMS Test mode are disabled
Pre-Conditions
Test Environment <ul style="list-style-type: none"> The LTE device under test (DUT) must be power off mode. This test must be performed on a device with default settings. Using DM tool, confirm that the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value is "1". Using DM tool, confirm that the DUT IMS Test mode control parameter is "disable".
Procedures
<ol style="list-style-type: none"> Using DM tool, configure the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value to "0". Using DM tool, configure the DUT IMS Test mode control parameter to "disable". Power up the DUT Using Test platform, confirm that DUT attaches via the IMS PDN and performs IMS registration. Execute Tests: " Mobile Originated SMS message- 3GPP SMS", and " Mobile Terminated SMS message- 3GPP SMS" Verify that SMS origination over IMS is disabled, but device is capable of receiving MT SMS messages over IMS. Power cycle the DUT and using DM tool, confirm the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" and IMS Test mode control parameter are still set to "0" and "disable" respectively.
Expected Results
<p>The LTE device IMS registration control setting parameters can be configurable and the configured setting parameters are persistent across device power cycles.</p> <p>The LTE device IMS registration attempt depends on the IMS registration control setting parameters:</p> <ul style="list-style-type: none"> LTE device does not perform IMS registration if IMS Test mode is enabled and SMS origination/termination over IMS is disabled LTE device performs IMS registration if both IMS test mode and "SMS_Over_IP_Networks_Indication" are disabled, receives MT SMS sent over IMS, but does not send any MO SMS over IMS
Design Steps
Step Name
SMS_over_IP_Networks_Indication and IMS Test mode are enabled
Pre-Conditions
Test Environment <ul style="list-style-type: none"> The LTE device under test (DUT) must be power off mode. This test must be performed on a device with default settings. Using DM tool, confirm that the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value is "1". Using DM tool, confirm that the DUT IMS Test mode control parameter is "disable".

Procedures

- a. Using DM tool, configure the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" value to "1".
- b. Using DM tool, configure the DUT IMS Test mode control parameter to "enable".
- c. Power up the DUT
- d. Using Test platform, confirm that DUT is not attempted to IMS registration and is only attached to LTE network.
- e. Execute Tests: " Mobile Originated SMS message- 3GPP SMS", and " Mobile Terminated SMS message- 3GPP SMS"
- f. Verify that, since DUT is in IMS Test mode operation, SMS origination and termination over IMS is disabled (DUT does not perform IMS registration)
- g. Power cycle the DUT and using DM tool, confirm the DUT SMS over IMS Control setting parameter "SMS_Over_IP_Networks_Indication" and IMS Test mode control parameter are still set to "1" and "enable" respectively.

Expected Results

The LTE device IMS registration control setting parameters can be configurable and the configured setting parameters are persistent across device power cycles.

The LTE device IMS registration attempt depends on the IMS registration control setting parameters:

- LTE device does not perform IMS registration if IMS Test mode is enabled and SMS origination/termination over IMS is disabled
- LTE device performs IMS registration if both IMS test mode and "SMS_Over_IP_Networks_Indication" are disabled, receives MT SMS sent over IMS, but does not send any MO SMS over IMS

2.55 MT 3GPP CONCATENATED SHORT MESSAGE (MORE THAN 1 SEGMENT OF TEXT) VZ_TC_LTESMS_6358

This test verifies the LTE device MT 3GPP Concatenated Short Message functionality.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • The Test platform shall support multi-segments short message capability.
Procedures
<ol style="list-style-type: none"> Compose and send a SMS message in 3GPP format with more than 160 characters from the Test platform to DUT. Using DUT, confirm that SMS message is received successfully
Expected Results
The LTE device successfully receives the 3GPP SMS message as single message when message contains more than 160 characters of text, and the text in the received message is the same as the text of the message sent from the test platform.

2.59 MO 3GPP SMS - MESSAGE STATUS REPORT VZ_TC_LTESMS_6360

This test verifies the LTE device MO 3GPP SMS functionality.

Device shall support message status report that is sent by network in response to MO messages when the end user request Status Report and sends a 3GPP message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Compose and send an SMS message with "Status Report" request from the DUT to the Test platform. Using the Test platform create status report message for the message sent by DUT in step a. Using DUT, confirm that DUT received and processed Message Status Report in response to the message sent.
Expected Results
The LTE device receives Message Status Report in response to the message sent.

2.62 MO 3GPP SMS ENCODED USING GSM 7- BIT VZ_TC_LTESMS_6363

This test verifies the LTE device MO 3GPP SMS functionality, when a message is encoded using GSM 7-bit character set in the message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Configure the DUT SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Compose an SMS message containing characters in GSM 7-bit character set and send the message to the test platform. Verify that the message is sent from the DUT to the Test platform. Capture the log through test platform and verify the message encoding. Verify that the message is same in between the one sent and the one received.
Expected Results
The LTE device sends 3GPP SMS message encoded in GSM-7 bit character set. The message received on the test platform is the same as the one sent from DUT.

2.63 MT 3GPP SMS ENCODED USING GSM 7-BIT VZ_TC_LTESMS_6364

This test verifies the LTE device MT 3GPP SMS functionality, when message is encoded in GSM 7-bit.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier.
Procedures
<ol style="list-style-type: none"> Compose and send a 3GPP SMS message encoded using GSM 7-bit character set from the Test platform to DUT. From DUT, compare the received message with the one sent from test platform.
Expected Results
The LTE device receives message encoded using GSM 7-bit from the test platform and the text in the received is the same as entered on the test platform.

2.68 MO 3GPP SMS Encoded Using UCS-2(ISOIEC 10646-1) VZ_TC_LTESMS_6369

This test verifies that the LTE device MO 3GPP SMS functionality, when message is encoded in UCS-2 (ISO/IEC 10646-1) character set.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Using DM tool, configure the DUT SMS format setting parameter "smsformat" to "3GPP".
Procedures
<ol style="list-style-type: none"> Compose a message less than 140 bytes with characters part of ASCII 7 bit and special characters that includes Unicode (i.e., Chinese characters or F, ²) on DUT. Send the message to the test platform. Check the message encoding on the test platform. Repeat from step "a" with more than 140 bytes message.
Expected Results
The LTE device sends message with text encoded using UCS-2 character set. Message shall include all the character as entered on DUT.

2.69 MT 3GPP SMS Encoded Using UCS-2(ISOIEC 10646-1) VZ_TC_LTESMS_6370

This test verifies the LTE device MT 3GPP SMS functionality, when message is encoded in UCS-2(ISO/IEC 10646-1) character set.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier.
Procedures

Expected Results
The LTE device receives the message successfully and the text in the received message is the same as entered on the test platform.

2.7.2 MT SMS Messages storage Function - 3GPP SMS VZ_TC_LTESMS_6373

This test verifies that message storage setting in the LTE device does not apply on class 2 3GPP message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
Test Environment <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • Delete all messages in inbox and UICC memory of DUT.
Procedures
<ol style="list-style-type: none"> Configure the DUT SMS storage setting parameter "smswriteuicc" to "OFF". Send "class 2" 3GPP SMS message with Protocol Identifier (TP-PID) set to "(U)SIM Data Download" from the Test platform to the DUT. Check the message storage in DUT. Check the message storage on UICC. Configure the DUT SMS storage setting parameter "smswriteuicc" to "ON". Send "class 2" 3GPP SMS message with Protocol Identifier (TP-PID) set to "(U)SIM Data Download" from the Test platform to the DUT. Check the message storage in DUT. Check the message storage on UICC.
Expected Results
<p>There are no class 2 messages on device memory storage area in steps c and g.</p> <p>There are no class 2 messages stored in UICC (USIM) message storage area in steps d and h. Device does not store Class 2 messages with Protocol Identifier (TP-PID) set to "(U)SIM Data Download" on either device or UICC message storage area.</p>

2.73 MT SIM OTA Wake Up SMS After IMS Registration Using the IMSI-based SIP URI VZ_TC_LTESMS_6374

This test verifies that the UE meets Verizon Wireless requirements for MT SIM OTA wake up SMS after IMS registration using the IMSI-based SIP URI.

Traceability

- Verizon Wireless LTE SMS Requirements
- Verizon Wireless LTE 3GPP Band 13 Network Access Requirements

Design Steps
Step Name
TEST 1 (IMSI SIP URI REGISTRATION TRIGGERED ON IMS REGISTRATION REJECTION WITH SIP ERROR CODES 403, 404)
Pre-Conditions
Procedures
<ol style="list-style-type: none"> 1. Configure the P-CSCF to reject all IMS registration requests with a SIP 403 error code. 2. Power on the UE. 3. Verify that the UE attaches to the LTE network using the IMS PDN. 4. Verify that the UE sends a SIP REGISTER message to the P-CSCF. Verify the following: <ol style="list-style-type: none"> 1. The UE uses the first P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN. 2. All SIP messages are routed on the dedicated bearer for the IMS PDN. 3. All SIP messages use UDP on port 5060. 4. The UE initiates a new registration (as opposed to a re-registration). 5. The UE uses the MSISDN-based SIP URI's in the FROM and TO headers (e.g. "sip:+15551234567@vzims.com") 6. The UE does not request IPSec. 7. The UE requests a registration expiration time of 600,000 seconds. 5. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code. 6. Verify that the UE sends another SIP REGISTER message using the same parameters as in step 4, with the following exception: <ol style="list-style-type: none"> 1. The UE uses IMSI-based SIP URIs in FROM and TO headers (e.g. "sip:

- 311480xxxxxxxx@ims.mnc480.mcc311.3gppnetwork.org").
7. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code.
 8. Verify the UE does not send another SIP REGISTER message for 30 seconds.
 9. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message using the same parameters as in step 4.) with the following exception:
 1. The UE uses the second P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
 10. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code.
 11. Verify the UE does not send another SIP REGISTER message for 30 seconds.
 12. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message using the same parameters as in step 4.) with the following exception:
 1. The UE uses the third P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
 13. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code.
 14. Verify the UE does not send another SIP REGISTER message for 30 seconds.
 15. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message using the same parameters as in step 4.) with the following exception:
 1. The UE uses the first P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
 2. The UE uses the IMSI-based SIP URI's in the FROM and TO headers (e.g. "sip:311480xxxxxxxx@ims.mnc480.mcc311.3gppnetwork.org").
 16. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 401 "Unauthorized" message to challenge the REGISTER message using Digest AKA v2 authentication (i.e. AKA v2-MD5).
 17. Verify that the UE sends a SIP REGISTER message to the P-CSCF with the correct Authorization header.
 18. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 200 OK message with a registration expiration time of 7200 seconds.
 19. Verify that the UE sends a SIP SUBSCRIBE message to the P-CSCF to subscribe to the reg events package. Verify that the UE sets the Event header field to "reg" and sets the Expires header field to 600,000 seconds.
 20. Configure the P-CSCF to respond to the SIP SUBSCRIBE message with a SIP 200 OK

message with a subscription expiration time of 7200 seconds.

21. Configure the P-CSCF to send a SIP NOTIFY to the UE corresponding to the reg event package subscription indicating the user's current subscription state.
22. Verify that the UE responds with a SIP 200 OK message.
23. Configure the test platform to send a SIM OTA wake up SMS message (for the SIM OTA client in the USIM of the UICC) to the device using the 3GPP SMS format. Configure the MDN field in the SMS message to be different than the MSISDN currently configured on the USIM under EFMSISDN.
24. Verify that the SMS message is received by the device.
25. Verify that the device makes a request for the administrative PDN by sending a NAS PDN CONNECTIVITY REQUEST message where the "APN" information element is set to "VZWADMIN".
26. Configure the network emulator to accept the PDN connection request.
27. Power off the UE.
28. Repeat steps 1.) through 25.) with a SIP 404 error code.

Expected Results

The device successfully IMS registers using the IMSI-based SIP URI and receives a SIM OTA wake up message for the UICC SIM OTA client.

Design Steps

Step Name

TEST 2 (IMSI SIP URI REGISTRATION TRIGGERED ON IMS RE-REGISTRATION REJECTION WITH SIP ERROR CODES 403, 404)

Pre-Conditions

Procedures

1. Power on the UE.
2. Verify that the UE attaches to the LTE network using the IMS PDN.
3. Verify that the UE sends a SIP REGISTER message to the P-CSCF. Verify the following:
 - a. The UE uses the first P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
 - b. All SIP messages are routed on the dedicated bearer for the IMS PDN.
 - c. All SIP messages use UDP on port 5060.
 - d. The UE initiates a new registration (as opposed to a re-registration).
 - e. The UE uses the MSISDN-based SIP URI's in the FROM and TO headers (e.g. "sip:+15551234567@vzims.com")

- f. The UE requests IPSec authentication.
- g. The UE requests a registration expiration time of 600,000 seconds.
4. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 401 "Unauthorized" message to challenge the REGISTER message using Digest AKA_{v2} authentication (i.e. AKA_{v2}-MD5).
5. Verify that the UE sends a SIP REGISTER message to the P-CSCF with the correct Authorization header.
6. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 200 OK message with a registration expiration time of 1500 seconds.
7. Verify that the UE sends a SIP SUBSCRIBE message to the P-CSCF to subscribe to the reg events package. Verify that the UE sets the Event header field to "reg" and sets the Expires header field to 600,000 seconds.
8. Configure the P-CSCF to respond to the SIP SUBSCRIBE message with a SIP 200 OK message with a subscription expiration time of 1500 seconds.
9. Configure the P-CSCF to send a SIP NOTIFY to the UE corresponding to the reg event package subscription indicating the user's current subscription state.
10. Verify that the UE responds with a SIP 200 OK message.
11. Verify that between 900 and 1500 seconds after step 6.) that the UE attempts a reregistration. Verify that:
 - a. The UE sends a valid SIP REGISTER message for a reregistration.
 - b. The UE sends the SIP REGISTER message inside the existing TLS security association.
 - c. The UE requests a registration expiration time of 600,000 seconds.
 - d. The UE sends the reregistration request to the same P-CSCF as the original registration.
12. Configure the P-CSCF to reject all IMS reregistration and registration requests with a SIP 403 error code.
13. Verify the UE does not send another SIP REGISTER message for 30 seconds.
14. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message for a new registration using the same parameters as in step 3.) with the following exception:
 - a. The UE uses the second P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
15. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code.
16. Verify the UE does not send another SIP REGISTER message for 30 seconds.
17. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message for a new registration using the same parameters as in step 3.) with the following exception:
 - a. The UE uses the third P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
18. Verify that the P-CSCF rejects the SIP REGISTER message from the device with a SIP 403 error code.
19. Verify the UE does not send another SIP REGISTER message for 30 seconds.
20. Once the 30 second throttling timer expires, verify that the UE sends another SIP REGISTER message for a new registration using the same parameters as in step 3.) with the following exception:
 - a. The UE uses the first P-CSCF IP address provided in the PCO field of the NAS ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message for the IMS PDN.
 - b. The UE uses the IMSI-based SIP URI's in the FROM and TO headers (e.g. "sip:311480xxxxxxx@ims.mnc480.mcc311.3gppnetwork.org").
21. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 401 "Unauthorized" message to challenge the REGISTER message using Digest AKA_{v2} authentication (i.e. AKA_{v2}-MD5).
22. Verify that the UE sends a SIP REGISTER message to the P-CSCF with the correct Authorization header.
23. Configure the P-CSCF to respond to the SIP REGISTER message with a SIP 200 OK message with a registration expiration time of 7200 seconds.
24. Verify that the UE sends a SIP SUBSCRIBE message to the P-CSCF to subscribe to the reg events package. Verify that the UE sets the

Event header field to "reg" and sets the Expires header field to 600,000 seconds.

25. Configure the P-CSCF to respond to the SIP SUBSCRIBE message with a SIP 200 OK message with a subscription expiration time of 7200 seconds.
26. Configure the P-CSCF to send a SIP NOTIFY to the UE corresponding to the reg event package subscription indicating the user's current subscription state.
27. Verify that the UE responds with a SIP 200 OK message.
28. Configure the test platform to send a SIM OTA wake up SMS message (for the SIM OTA client in the USIM of the UICC) to the device using the 3GPP SMS format. Configure the MDN field in the SMS message to be different than the MSISDN currently configured on the USIM under EF_{MSISDN}.
29. Verify that the SMS message is received by the device.
30. Verify that the device makes a request for the administrative PDN by sending a NAS PDN CONNECTIVITY REQUEST message where the "APN" information element is set to "VZWADMIN".
31. Configure the network emulator to accept the PDN connection request.
32. Power off the UE.
33. Repeats steps 1.) through 32.) with a SIP 404 error code.

Expected Results

The device successfully IMS registers using the IMSI-based SIP URI and receives a SIM OTA wake up message for the UICC SIM OTA client.

2.75 DEVICE MO SMS - VERIFY FORMAT SETTING- MODIFIED, SIP MESSAGE Headers, and SIP Call Flow VZ_TC_LTESMS_9562

This test verifies whether the LTE device MO SMS format setting is configurable, mobile-originated SMS-Over-IMS functionality (when device MO SMS format is 3GPP), SIP MESSAGE header information for MO 3GPP SMS formatted message, and SIP call flow for successful mobile-originated 3GPP SMS message.

Traceability

- VZW LTE SMS device requirements

Design Steps
Step Name
Step 1
Pre-Conditions
<p>Test Environment</p> <ul style="list-style-type: none"> • The LTE device under test (DUT) must be registered with IMS through LTE carrier. • This test must be performed on a device with default SMS format settings.
Procedures
<ol style="list-style-type: none"> a. Using DM tool configure the DUT SMS format setting parameter "smsformat" to "3GPP". b. Send an SMS message from the DUT to the Test platform. c. Using the Test platform confirm that the DUT sent the SIP MESSAGE (Containing the SMS text) with content header set to "application/vnd.3gpp.sms", to indicate the MO 3GPP SMS format. d. Power cycle the DUT and using DM tool, confirm that the MO SMS format setting parameter "smsformat" is "3GPP". e. Send an SMS message from the DUT and using Test platform confirm that the DUT sent an SMS with 3GPP format. a. Using Test platform, verify that the SMS is received successfully from DUT with the message text sent at step a. b. Using Test platform, verify that DUT successfully sent the 3GPP SMS message and also verify the below steps c through g for SIP MESSAGE headers of the MO 3GPP SMS c. Verify that the "Request-URI header and the To" header is properly indicating the tel URI of destination. (The tel URI contains the digits string entered by the user as destination. i.e. the digit string is equal the MDN of the destination device or corresponds to the short code). Example: To: "<tel: 9085555555>" d. Verify that the "Request-Disposition header" contains the "no-fork" directive. e. Verify that the "Content-Type" header is set to the "application/vnd.3gpp.sms" f. Verify that the "From" header is properly set to the IMS public User identity of the DUT. (The format of Public User identity is MSISDN-based SIP URI (i.e. "sip: +1MDN@<home_network_domain_name>" where MDN is the DUT MDN in an E.164 format). Example: From: " <sip:+19085555555@test.3gpp.com;user=phone>". g. Verify that P-Access-Network-Info header is included in SIP MESSAGE method for any SMS message that is sent, including "access-type" and "access-info".

Expected Results
<p>The LTE device successfully sends SMS message over IMS with 3GPP SMS format</p> <p>The LTE device successfully sends 3GPP SMS message over IMS with appropriate SIP MESSAGE header information.</p> <p>The LTE device MO SMS format setting is configurable to "3GPP" or "3GPP2" formats</p>
Design Steps
Step Name
Step 2
Pre-Conditions
Procedures
<ol style="list-style-type: none"> Send an SMS message from DUT to the Test platform. Using Test platform, verify that DUT sent SIP MESSAGE to P-CSCF indicating MO 3GPP SMS message. Configure P-CSCF to send SIP 200 OK to indicate successful SMS message acknowledgement. <p>Using Test platform, confirm that DUT received SIP 200 OK message from P-CSCF (IMS).</p>
Expected Results
<p>The LTE device successfully exchanges the SIP messages with P-CSCF for MO 3GPP SMS messages.</p>
Design Steps
Step Name
Step 3
Pre-Conditions
Procedures
<ol style="list-style-type: none"> Send an SMS message from DUT to the Test platform. Using Test platform, verify that DUT sent SIP MESSAGE to P-CSCF indicating the MO 3GPP SMS. Configure P-CSCF to send SIP 202 ACCEPTED to indicate the successful SMS message acknowledgement. Using Test platform, confirm that DUT received SIP 202 Accepted message from P-CSCF (IMS).
Expected Results
<p>The LTE device successfully exchanges the SIP messages with P-CSCF for MO 3GPP SMS messages.</p>

2.90 Test Results Template VZ_TC_LTESMS_6707

The header block for the test results should define: what device was tested, when it was tested, who tested it, and what equipment was used to test it.

PRODUCT TESTED	Version		
MFR/Model:	Hardware	Software/Firmware	Watcher
Module (if applicable):	Hardware	Software/Firmware	
ESN/IMEI:			
Additional Information:			
Tester:	Test Date(s):	Test Location:	
Monitoring Software	Port		

Test No.	Test	Expected	Actual	PASS/ FAIL
2.1	Device initial MSISDN based IMS Registration	The LTE device successfully performs the registration with IMS.		
2.2	Void			
2.3	Void			
2.4	Void			
2.5	Device Reg event package subscription	The LTE device successfully subscribes to the registration event package.		
2.6	Device Reregistration with IMS- Device	The LTE device successfully performs the user initiated		

	initiated	Reregistration with IMS		
2.7	Device Reregistration with IMS- Network initiated	The LTE device successfully performs the network initiated Reregistration with IMS		
2.8	Device Deregistration with IMS- Device initiated	The LTE device successfully performs the user initiated deregistration with IMS		
2.9	Device Deregistration with IMS- Network initiated	The LTE device successfully performs the network initiated Deregistration with IMS		
2.10	Device MO SMS format setting- Default	The LTE device default MO SMS format setting parameter "smsformat" value is "3GPP2".		
2.11	Device MO SMS format setting- Modified	The LTE device MO SMS format setting is configurable to "3GPP" or "3GPP2" formats and the MO SMS format setting is persistent across device power cycles.		
2.12	Mobile Originated SMS Message- 3GPP2 SMS	The LTE device successfully sends SMS message over IMS with 3GPP2 SMS format		
2.13	Mobile Originated SMS Message - 3GPP SMS	The LTE device successfully sends SMS message over IMS with 3GPP SMS format		
2.14	Mobile terminated SMS message 3GPP2 SMS	The LTE device successfully receives the MT 3GPP formatted SMS message over IMS		
2.15	Mobile terminated SMS message 3GPP SMS	The LTE device successfully receives 3GPP formatted SMS message over IMS		

2.16	MO 3GPP2 SMS- Verify SIP Message headers	The LTE device successfully sends 3GPP2 SMS message over IMS with appropriate SIP MESSAGE header information.		
2.17	MO 3GPP SMS- Verify SIP Message headers	The LTE device successfully sends 3GPP SMS message over IMS with appropriate SIP MESSAGE header information.		
2.18	MO 3GPP2 SMS Message- Verify SIP call flow	The LTE device successfully exchanges the SIP messages with P-CSCF for MO 3GPP2 SMS messages.		
2.18.4	Test procedure- SIP 200 OK Response			
2.18.5	Test procedure- SIP 202 ACCEPTED Response			
2.19	MO 3GPP SMS Message- Verify SIP call flow	The LTE device successfully exchanges the SIP messages with P-CSCF for MO 3GPP SMS messages.		
2.19.4	Test procedure- SIP 200 OK Response			
2.19.5	Test procedure- SIP 202 ACCEPTED Response			
2.20	MT 3GPP2 SMS Message- Verify SIP call flow	The LTE device successfully exchanges the SIP messages with P-CSCF for MT 3GPP2 SMS messages.		
2.21	MT 3GPP SMS Message- Verify SIP call flow	The LTE device successfully exchanges the SIP messages with P-CSCF for MT 3GPP SMS messages and returns a SIP 200 OK response to the network as well as the Delivery Report.		
2.22	MO 3GPP2 SMS Message size More than 256 bytes.	The LTE device successfully sends the 3GPP2 SMS message, when SMS message size (SMS payload) is more than 256 bytes.		
2.23	MO 3GPP SMS Message size More than 256 bytes	The LTE device successfully sends the 3GPP SMS message, when SMS message size (SMS payload) is more than 256 bytes.		
2.24	Application directed SMS- OTADM	The LTE device correctly responds to the application-directed OTADM message.		
2.25	Void			
2.26	SMS Message storage setting (default)- 3GPP SMS	The LTE device default SMS storage setting parameter "smswriteuicc" values is "OFF" and the MO/ MT 3GPP SMS message shall be stored in the device memory location.		
2.27	Void			

2.28	SMS Message storage setting (Modified) 3GPP SMS	The LTE device SMS storage setting parameter "smswriteuicc" is configurable. The MO and MT 3GPP SMS messages shall be stored in the device memory when "smswriteuicc" value is "OFF". The MO and MT 3GPP SMS messages are stored in the device UICC (USIM) card memory when "smswriteuicc" is "ON".		
2.29	MO 3GPP2 SMS retry behavior- Default SIP T1, Timer F and T2 timer	The LTE device default SIP "T1", "T2" and "Timer F" timer values are 3 seconds, 16 seconds and 30 seconds respectively and device follows the proper retry logic for MO 3GPP2 SMS based on the SIP timers.		
2.30	MO 3GPP SMS retry behavior- Default SIP T1, Timer F and T2 timer	The LTE device default SIP "T1", "T2" and "Timer F" timer values are 3 seconds, 16 seconds and 30 seconds respectively and device follows the proper retry logic for MO 3GPP SMS based on the SIP timers.		
2.31	MO 3GPP2 SMS retry behavior- Modified SIP T1, Timer F and T2 timer	The LTE device SIP timers "T1", "T2" and "Timer F" are configurable and device follows the proper retry logic for MO 3GPP2 SMS based on the modified SIP timers.		
2.32	MO 3GPP SMS retry behavior- Modified SIP T1, Timer F and T2 timer	The LTE device SIP timers "T1", "T2" and "Timer F" are configurable and device follows the proper retry logic for MO 3GPP SMS based on the modified SIP timers.		
2.33	3GPP2 SMS - SIP Errors	The LTE device shall identify the SIP errors.		
2.33.4	Test Procedure- SIP 400 BAD REQUEST			
2.33.5	Test Procedure- SIP 404 NOT FOUND			
2.33.6	Test Procedure- SIP 500 SERVER INTERNAL ERROR			
2.33.7	Test Procedure- SIP 502 BAD GATEWAY			
2.33.8	Test Procedure- SIP 503 SERVICE UNAVAILABLE ERROR			
2.34	3GPP SMS - SIP Errors	The LTE device shall successfully identify the SIP errors.		
2.34.4	Test Procedure- SIP 400 BAD REQUEST			
2.34.5	Test Procedure- SIP 404 NOT FOUND			
2.34.6	Test Procedure- SIP 500 SERVER			

	INTERNAL ERROR			
2.34.7	Test Procedure- SIP 502 BAD GATEWAY			
2.34.8	Test Procedure- SIP 503 SERVICE UNAVAILABLE ERROR			
2.35	MO 3GPP2 SMS retry behavior- Default SMS Storage setting	The LTE device follows the proper retry logic for MO 3GPP2 SMS and the sent MO 3GPP2 SMS messages shall be stored with the proper status indication (failed/Pass). MESSAGE_ID value sent in the second attempt is the same as the one in the initial attempt.		
2.35.	Test Procedure- No response from IMS			
2.35.5	Test Procedure- SIP error from IMS			
2.36	MO 3GPP SMS retry behavior- Default SMS Storage setting	The LTE device follows the proper retry logic for MO 3GPP SMS and the sent MO 3GPP SMS message shall be stored in the device memory location with the proper status indication (failed). In the second attempt, device sets TP-Reject-Duplicates (TP-RD) bit to 1 and the TP-Message-Reference (TP-MR) value is the same as the one in the initial attempt.		
2.36.4	Test Procedure- No response from IMS			
2.36.5	Test Procedure- SIP error from IMS			
2.37	Void			
2.38	MO 3GPP SMS retry behavior- Modified SMS Storage setting	The LTE device follows the proper retry logic for MO 3GPP SMS and the sent MO 3GPP SMS message shall be stored in the device UICC (USIM) card memory location with the proper status indication (failed). In the second attempt, device sets TP-Reject-Duplicates (TP-RD) bit to 1 and the TP-Message-Reference (TP-MR) value is the same as the one in the initial attempt.		
2.38.4	Test Procedure- No response from IMS			
2.38.5	Test Procedure- SIP error from IMS			
2.39	Device IMS Registration control parameter- Default	The LTE device successfully performs IMS registration with the default device IMS registration control parameter settings. The LTE device default SMS over IMS control setting parameter "SMS_Over_IP_Networks_Indication" value is "1" and IMS Test mode control parameter is "disabled". With default values of "SMS_Over_IP_Networks_Indication" and IMS Test mode control parameter, LTE device successfully sends MO SMS (3gpp/3gpp2) and receives MT SMS (3gpp/3gpp2) over IMS.		
2.40	Device IMS Registration control parameter- Modified	The LTE device IMS registration control setting parameters can be configurable and the configured setting parameters are persistent across device power cycles. The LTE device IMS registration attempt depends on the		
2.40.4	Test procedure-			

	SMS_over_IP_Networks_Indication and IMS Test mode are "Disable"	IMS registration control setting parameters: <ul style="list-style-type: none"> LTE device does not perform IMS registration if IMS Test mode is enabled and SMS origination/termination over IMS is disabled LTE device performs IMS registration if both IMS test mode and "SMS_Over_IP_Networks_Indication" are disabled, receives MT SMS sent over IMS, but does not send any MO SMS over IMS 		
2.40.5	Test procedure- SMS_over_IP_Networks_Indication and IMS Test mode are "Enable"			
2.40.6	Test procedure- SMS_over_IP_Networks_Indication and IMS Test mode are "Disable" and "Enable" respectively			
2.41	Device Initial IMSI-based IMS registration	The LTE device successfully performs the IMSI-based IMS registration.		
2.42	Device IMSI-based IMS registration- SMS operation	The LTE device shall not support MO and MT SMS messages.		
2.43	Device IMS registration retry behavior- No response from IMS	The LTE device follows the appropriate retry mechanism for IMS registration.		
2.44	Device IMS registration retry behavior- SIP errors	The LTE device follows the appropriate retry mechanism for IMS registration.		
2.44.4	Test Procedure- SIP 400 BAD REQUEST			
2.44.5	Test Procedure -SIP 500 SERVER INTERNAL ERROR			
2.44.6	Test Procedure- SIP 502 BAD GATEWAY			
2.44.7	Test Procedure- SIP 503 SERVICE UNAVAILABLE ERROR			
2.44.8	Test Procedure- SIP 408 REQUEST TIMEOUT			
2.45	Device IMS Registration retry behavior- SIP 404-Not found error	The LTE device follows the appropriate retry mechanism for IMS registration,		
2.46	Device IMS Registration retry behavior- SIP 403- Forbidden error	The LTE device follows the appropriate retry mechanism for IMS registration,		
2.47	Device IMS Reregistration retry behavior- No response from IMS	The LTE device follows the appropriate retry mechanism for IMS re-reregistration.		
2.48	Device IMS Reregistration retry behavior- Registration rejection from IMS	The LTE device follows the appropriate retry mechanism for IMS re-registration.		

2.48.4	Test Procedure- SIP 400 BAD REQUEST			
2.48.5	Test Procedure- SIP 500 SERVER INTERNAL ERROR			
2.48.6	Test Procedure- SIP 502 BAD GATEWAY			
2.48.7	Test Procedure- SIP 503 SERVICE UNAVAILABLE ERROR			
2.48.8	Test Procedure- SIP 408 REQUEST TIMEOUT			
2.49	Device IMS Re-registration retry behavior- SIP 404-Not found error	The LTE device follows the appropriate retry mechanism for IMS re-registration.		
2.50	Device IMS Re-registration retry behavior- SIP 403- Forbidden error	The LTE device follows the appropriate retry mechanism for IMS re-registration.		
2.51	Device IMS interaction- IPSec confidentiality protection	The LTE device successfully supports IMS registration, MO and MT SMS messages, when IPSec for confidentiality protection is enabled.		
2.52	Device Network bearer configuration- Default bearer	The LTE device properly interacts to IMS for different network bearer configurations.		
2.53	Device Network bearer configuration- Dedicated bearer	The LTE device properly interacts to IMS for different network bearer configurations.		
2.54	MT 3GPP2 Concatenated Short Message (more than 1 segment of text)	The LTE device successfully receives the 3GPP2 SMS message as single message when message contains more than 160 characters of text, and message text received is same as the one sent from test platform.		
2.55	MT 3GPP Concatenated Short Message (more than 1 segment of text)	The LTE device successfully receives the 3GPP SMS message as single message when message contains more than 160 characters of text, and the text in the received message is the same as the text of the message sent from test platform.		
2.56	VOID			
2.57	VOID			
2.58	MO 3GPP2 SMS Message Delivery Acknowledgements	The LTE device receives Message Delivery Acknowledgement in response to the message sent.		
2.59	MO 3GPP SMS - Message Status Report	The LTE device receives Message Status Report in response to the message sent.		

2.60	MO 3GPP2 SMS Encoded using 7 bit ASCII	The LTE device sends 7-bit ASCII characters to the test platform and the received message in the test platform is same as the one sent from the LTE device.		
2.61	MT 3GPP2 SMS Encoded using 7 bit ASCII	The LTE device receives message encoded in 7-bit ASCII character set from the test platform and there is no difference between the received message and sent message from the test platform.		
2.62	MO 3GPP SMS Encoded Using GSM 7-bit	The LTE device sends 3GPP SMS message encoded in GSM-7 bit character set. The message received on the test platform is the same as the one sent from DUT.		
2.63	MT 3GPP SMS Encoded Using GSM 7-bit	The LTE device receives message encoded using GSM 7-bit from the test platform and the text in the received is the same as entered on the test platform.		
2.64	MO 3GPP2 SMS Encoded Using GSM 7-bit	The LTE device sends 3GPP2 SMS message encoded in GSM-7 bit character set. The message received on the test platform is the same as the one sent from DUT.		
2.65	MT 3GPP2 SMS Encoded Using GSM 7-bit	The LTE device receives message encoded using GSM 7-bit from the test platform and the text in the received is the same as entered on the test platform.		
2.66	MO 3GPP2 SMS Encoded Using UCS-2(ISO/IEC 10646-1)	The LTE device sends message with text encoded using UCS-2 character set. Message shall include all the character as entered on DUT.		
2.67	MT 3GPP2 SMS Encoded Using UCS-2(ISO/IEC 10646-1)	The LTE device receives the message successfully and the text in the received message is the same as entered on the test platform.		
2.68	MO 3GPP SMS Encoded Using UCS-2(ISO/IEC 10646-1)	The LTE device sends message with text encoded using UCS-2 character set. Message shall include all the character as entered on DUT.		
2.69	MT 3GPP SMS Encoded Using UCS-2(ISO/IEC 10646-1)	The LTE device receives the message successfully and the text in the received message is the same as entered on the test platform.		
2.70	MT 3GPP2 SMS Encoded Using IA5 (ITU-T T.50)	The LTE device receives the message successfully and the text in the received message is the same as entered on the test platform.		
2.71	MT 3GPP2 SMS Encoded Latin (ISO 8859-1)	The LTE device receives the message successfully and the text in the received message is the same as entered on the test platform.		
2.72	MT SMS Messages storage Function 3GPP SMS	There are no class 2 messages on device memory storage area in steps c and g. There are no class 2 messages stored in UICC (USIM) message storage area in steps d and h. Device does not store		

		Class 2 messages with Protocol Identifier (TP-PID) set to "(U)SIM Data Download" on either device or UICC message storage area.		
2.73	MT SIM OTA Wake UP SMS after IMS Registration using the IMSI-Based SIP URI	<p>The UE receives SIM OTA wake up message for the SIM OTA client in the UISM.</p> <p>The UE makes an administrative PDN connection request to facilitate the SIM OTA session.</p>
