

**Test Plan**

Plan Name: LTE Data Retry IMS Less Test Plan

Plan Id: DATARETRYIMSLESS

Version Number: 15

Release Date: February 2025

Latest Release Date: February 2025 : Open Access

LTE Data Retry IMS Less VZ_TC_DATARETRYIMSLESS_1500711	10
2.1 RRCONNECTIONREJECT MESSAGE INITIAL ATTACH VZ_TC_DATARETRYIMSLESS_1500713	23
2.2 RRCONNECTIONREJECT MESSAGE SENDING DATA TO A CONNECTED PDN VZ_TC_DATARETRYIMSLESS_1500714	25
2.3 NETWORK DOES NOT RESPOND TO RACH VZ_TC_DATARETRYIMSLESS_1500715	27
2.4 MULTIPLE RRC FAILURES VZ_TC_DATARETRYIMSLESS_1500716	29
3.1 UE FAILS TO AUTHENTICATE THE NETWORK INVALID MAC CODE VZ_TC_DATARETRYIMSLESS_1500717	34
3.1.1 UE fails to authenticate to the NW - Invalid MAC - T1 VZ_TC_DATARETRYIMSLESS_4105999311931631	36
3.1.2 UE fails to authenticate to the NW - Invalid MAC - T2 VZ_TC_DATARETRYIMSLESS_4105999311931632	37
3.2 UE FAILS TO AUTHENTICATE THE NETWORK INVALID VALUE FOR SEPARATION BIT VZ_TC_DATARETRYIMSLESS_1500718	38
3.3 UE FAILS TO AUTHENTICATE THE NETWORK INVALID VALUE FOR SQN FIELD VZ_TC_DATARETRYIMSLESS_1500719	41
3.4 UE SENDS SECURITY MODE REJECT MESSAGE INITIAL ATTACH VZ_TC_DATARETRYIMSLESS_1500720	43
4.1 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 19 VZ_TC_DATARETRYIMSLESS_1500727	46
4.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES 3, 6, 7, AND 8 VZ_TC_DATARETRYIMSLESS_1500728	48
4.2.1 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK - code 3 VZ_TC_DATARETRYIMSLESS_4105999311931665	50
4.2.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK - code 6 VZ_TC_DATARETRYIMSLESS_4105999311931666	51
4.2.3 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES - code 7 VZ_TC_DATARETRYIMSLESS_4105999311931667	52
4.2.4 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES - code 8 VZ_TC_DATARETRYIMSLESS_4105999311931668	53
4.3 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES 11 AND 14 VZ_TC_DATARETRYIMSLESS_1500729	54
4.3.1 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES - code 11 VZ_TC_DATARETRYIMSLESS_4105999311931669	56
4.3.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES - code 14 VZ_TC_DATARETRYIMSLESS_4105999311931670	57
4.4 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES 12, 13, AND 15 VZ_TC_DATARETRYIMSLESS_1500730	58

4.4.1 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK - core 12	
VZ_TC_DATARETRYIMSLESS_4105999311931671	60
4.4.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK - core 13	
VZ_TC_DATARETRYIMSLESS_4105999311931672	61
4.4.3 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK - core 15	
VZ_TC_DATARETRYIMSLESS_4105999311931673	62
4.5 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 17	
VZ_TC_DATARETRYIMSLESS_1500731	63
4.6 UE WITH T ₃₃₄₆ TIMER SUPPORT RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 22	
VZ_TC_DATARETRYIMSLESS_1500721	65
4.7 UE RECEIVES ATTACH REJECT AND PDN CONNECTIVITY REJECT MESSAGES FROM THE NETWORK	
VZ_TC_DATARETRYIMSLESS_1500722	67
4.8 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODES 95, 96, 97, 99, AND 111	
VZ_TC_DATARETRYIMSLESS_1500723	70
4.8.1 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK - Code 95	
VZ_TC_DATARETRYIMSLESS_4105999311931633	72
4.8.2 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK - Code 96	
VZ_TC_DATARETRYIMSLESS_4105999311931634	73
4.8.3 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK - Code 97	
VZ_TC_DATARETRYIMSLESS_4105999311931635	74
4.8.4 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK - Code 99	
VZ_TC_DATARETRYIMSLESS_4105999311931636	75
4.8.5 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK - Code 111	
VZ_TC_DATARETRYIMSLESS_4105999311931637	76
4.9 UE WITH T ₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 11	
VZ_TC_DATARETRYIMSLESS_1500724	77
4.9.1 UE WITH T ₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 11 - T ₁	
VZ_TC_DATARETRYIMSLESS_4105999311931655	83
4.9.2 UE WITH T ₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 11 - T ₂	
VZ_TC_DATARETRYIMSLESS_4105999311931656	84
4.10 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE	
VZ_TC_DATARETRYIMSLESS_1500725	85
4.10.1 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE - Code 3	
VZ_TC_DATARETRYIMSLESS_4105999311931657	88
4.10.2 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE - Code 6	
VZ_TC_DATARETRYIMSLESS_4105999311931658	89
4.10.3 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE - Code 7	
VZ_TC_DATARETRYIMSLESS_4105999311931659	90

4.10.4 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE - Code 8	
VZ_TC_DATA_RETRYIMSLESS_4105999311931660	91
4.11 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH DETACH REQUEST	
VZ_TC_DATA_RETRYIMSLESS_1500726	92
4.11.1 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH DETACH REQUEST - Code 3	
VZ_TC_DATA_RETRYIMSLESS_4105999311931661	95
4.11.2 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH DETACH REQUEST - Code 6	
VZ_TC_DATA_RETRYIMSLESS_4105999311931662	96
4.11.3 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH DETACH REQUEST - Code 7	
VZ_TC_DATA_RETRYIMSLESS_4105999311931663	97
4.11.4 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH DETACH REQUEST - Code 8	
VZ_TC_DATA_RETRYIMSLESS_4105999311931664	98
4.12 UE WITH T ₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 14	
VZ_TC_DATA_RETRYIMSLESS_1500732	99
4.13 UE WITH T ₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 8	
VZ_TC_DATA_RETRYIMSLESS_1500733	102
5.1 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK CODE 11	
VZ_TC_DATA_RETRYIMSLESS_1500742	106
5.2 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK CODES 12, 13, AND 15	
VZ_TC_DATA_RETRYIMSLESS_1500743	108
5.2.1 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK - Code 12	
VZ_TC_DATA_RETRYIMSLESS_4105999311931682	110
5.2.2 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK - Code 13	
VZ_TC_DATA_RETRYIMSLESS_4105999311931683	111
5.2.3 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK - Code 15	
VZ_TC_DATA_RETRYIMSLESS_4105999311931684	112
5.3 SERVICE REQUEST FAILS GENERIC THROTTLING ALGORITHM INVOKED	
VZ_TC_DATA_RETRYIMSLESS_1500744	113
5.4 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK CODE 17	
VZ_TC_DATA_RETRYIMSLESS_1500745	117
5.5 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODES 12, 13, AND 15	
VZ_TC_DATA_RETRYIMSLESS_1500746	120
5.5.1 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK - Code 12	
VZ_TC_DATA_RETRYIMSLESS_4105999311931685	123
5.5.2 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK - Code 13	
VZ_TC_DATA_RETRYIMSLESS_4105999311931686	124
5.5.3 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK - Code 15	
VZ_TC_DATA_RETRYIMSLESS_4105999311931687	125

5.6 TRACKING AREA UPDATE REQUEST FAILS TRACKING AREA UPDATE ATTEMPT COUNTER REACHES MAX VALUE VZ_TC_DATARETRYIMSLESS_1500734	126
5.7 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODE 17 VZ_TC_DATARETRYIMSLESS_1500735	129
5.8 UE WITH T ₃₃₄₆ TIMER SUPPORT RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK CODE 22 VZ_TC_DATARETRYIMSLESS_1500736	131
5.10 UE WITH T ₃₃₄₆ TIMER SUPPORT RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODE 22 VZ_TC_DATARETRYIMSLESS_1500738	133
5.12 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH SERVICE REQUEST VZ_TC_DATARETRYIMSLESS_1500740	136
5.12.1 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH SERVICE REQUEST - code 3 VZ_TC_DATARETRYIMSLESS_4105999311931674	139
5.12.2 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH SERVICE REQUEST - code 6 VZ_TC_DATARETRYIMSLESS_4105999311931675	140
5.12.3 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH SERVICE REQUEST - code 7 VZ_TC_DATARETRYIMSLESS_4105999311931676	141
5.12.4 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH SERVICE REQUEST - code 8 VZ_TC_DATARETRYIMSLESS_4105999311931677	142
5.13 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH TRACKING AREA UPDATE VZ_TC_DATARETRYIMSLESS_1500741	143
5.13.1 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH TRACKING AREA UPDATE - code 3 VZ_TC_DATARETRYIMSLESS_4105999311931678	146
5.13.2 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH TRACKING AREA UPDATE - code 6 VZ_TC_DATARETRYIMSLESS_4105999311931679	147
5.13.3 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH TRACKING AREA UPDATE - code 7 VZ_TC_DATARETRYIMSLESS_4105999311931680	148
5.13.4 PERMANENT EMM FAILURES ACROSS POWER CYCLE WITH TRACKING AREA UPDATE - code 8 VZ_TC_DATARETRYIMSLESS_4105999311931681	149
6.1 NETWORK FAILS TO REFRESH THE IPV6 ADDRESS FOR THE INTERNET PDN, NO IPV4 ADDRESS ASSIGNED VZ_TC_DATARETRYIMSLESS_1500755	150
6.2 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE ADMIN PDN- INITIAL CONNECTION, NO IPV4 ADDRESS ASSIGNED VZ_TC_DATARETRYIMSLESS_1500757	154
6.3 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE ADMIN PDN- INITIAL CONNECTION, IPV4 ADDRESS ASSIGNED VZ_TC_DATARETRYIMSLESS_1500758	157
6.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT VZ_TC_DATARETRYIMSLESS_1500759	159

6.4.1 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC26	
VZ_TC_DATA_RETRYIMSLESS_4105999311931698	162
6.4.2 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC30	
VZ_TC_DATA_RETRYIMSLESS_4105999311931699	163
6.4.3 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC31	
VZ_TC_DATA_RETRYIMSLESS_4105999311931700	164
6.4.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC34	
VZ_TC_DATA_RETRYIMSLESS_4105999311931701	165
6.4.5 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC38	
VZ_TC_DATA_RETRYIMSLESS_4105999311931702	166
6.4.6 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC95	
VZ_TC_DATA_RETRYIMSLESS_4105999311931703	167
6.4.7 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC96	
VZ_TC_DATA_RETRYIMSLESS_4105999311931704	168
6.4.8 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC97	
VZ_TC_DATA_RETRYIMSLESS_4105999311931705	169
6.4.9 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC98	
VZ_TC_DATA_RETRYIMSLESS_4105999311931706	170
6.4.10 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC99	
VZ_TC_DATA_RETRYIMSLESS_4105999311931707	171
6.4.11 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC100	
VZ_TC_DATA_RETRYIMSLESS_4105999311931708	172
6.4.12 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC101	
VZ_TC_DATA_RETRYIMSLESS_4105999311931709	173
6.4.13 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT - CC111	
VZ_TC_DATA_RETRYIMSLESS_4105999311931710	174

6.5 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODES 26, 30, 31, 34, 38, 95, 96, 97, 98, 99, 100, 101, and 111 VZ_TC_DATARETRYIMSLESS_1500760	175
6.5.1 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC26 VZ_TC_DATARETRYIMSLESS_4105999311931711	178
6.5.2 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC30 VZ_TC_DATARETRYIMSLESS_4105999311931712	179
6.5.3 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC31 VZ_TC_DATARETRYIMSLESS_4105999311931713	180
6.5.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC34 VZ_TC_DATARETRYIMSLESS_4105999311931714	181
6.5.5 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC38 VZ_TC_DATARETRYIMSLESS_4105999311931715	182
6.5.6 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC95 VZ_TC_DATARETRYIMSLESS_4105999311931716	183
6.5.7 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC96 VZ_TC_DATARETRYIMSLESS_4105999311931717	184
6.5.8 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC97 VZ_TC_DATARETRYIMSLESS_4105999311931718	185
6.5.9 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC98 VZ_TC_DATARETRYIMSLESS_4105999311931719	186
6.5.10 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC99 VZ_TC_DATARETRYIMSLESS_4105999311931720	187
6.5.11 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC100 VZ_TC_DATARETRYIMSLESS_4105999311931721	188
6.5.12 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC101 VZ_TC_DATARETRYIMSLESS_4105999311931722	189
6.5.13 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - CC111 VZ_TC_DATARETRYIMSLESS_4105999311931723	190
6.6 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODES 8, 27, 29, 32, 33, AND 112 VZ_TC_DATARETRYIMSLESS_1500761	191
6.6.1 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 8 VZ_TC_DATARETRYIMSLESS_4105999311931724	196
6.6.2 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 27 VZ_TC_DATARETRYIMSLESS_4105999311931725	197
6.6.3 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 29 VZ_TC_DATARETRYIMSLESS_4105999311931726	198
6.6.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 32 VZ_TC_DATARETRYIMSLESS_4105999311931727	199

6.6.5 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 33	VZ_TC_DATA_RETRYIMSLSS_4105999311931728.....	200
6.6.6 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN - Code 112	VZ_TC_DATA_RETRYIMSLSS_4105999311931729.....	201
6.7 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN CODES 8, 27, 29, 32, 33, AND 112	VZ_TC_DATA_RETRYIMSLSS_1500747.....	202
6.7.1 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 8	VZ_TC_DATA_RETRYIMSLSS_4105999311931688.....	205
6.7.2 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 27	VZ_TC_DATA_RETRYIMSLSS_4105999311931689.....	206
6.7.3 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 29	VZ_TC_DATA_RETRYIMSLSS_4105999311931690.....	207
6.7.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 32	VZ_TC_DATA_RETRYIMSLSS_4105999311931691.....	208
6.7.5 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 33	VZ_TC_DATA_RETRYIMSLSS_4105999311931692.....	209
6.7.6 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR INTERNET PDN - Code 112	VZ_TC_DATA_RETRYIMSLSS_4105999311931693.....	210
6.8 NETWORK FAILS TO RESPOND TO PDN CONNECTIVITY REQUEST	VZ_TC_DATA_RETRYIMSLSS_1500748.....	211
6.9 NETWORK FAILS TO REFRESH THE IPV6 ADDRESS FOR THE INTERNET PDN, IPV4 ADDRESS ASSIGNED	VZ_TC_DATA_RETRYIMSLSS_1500749.....	214
6.10 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE INTERNET PDN ON NETWORK ATTACH, IPV4 ADDRESS ASSIGNED TO INTERNET	VZ_TC_DATA_RETRYIMSLSS_1500750.....	216
6.11 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE INTERNET PDN ON NETWORK ATTACH, NO IPV4 ADDRESS ASSIGNED	VZ_TC_DATA_RETRYIMSLSS_1500751.....	218
6.13 UE MAKES EXCESSIVE PDN CONNECTIVITY REQUESTS	VZ_TC_DATA_RETRYIMSLSS_1500753.....	220
6.13.1 UE MAKES EXCESSIVE PDN CONNECTIVITY REQUESTS - T1	VZ_TC_DATA_RETRYIMSLSS_4105999311931694.....	228
6.13.2 UE MAKES EXCESSIVE PDN CONNECTIVITY REQUESTS - T2	VZ_TC_DATA_RETRYIMSLSS_4105999311931695.....	229
6.14 UE MAKES ATTACH REQUEST WHILE THROTTLING ON PDN	VZ_TC_DATA_RETRYIMSLSS_1500754.....	230
6.15 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODES 26 AND 27 WITH T3396 TIMER SET	VZ_TC_DATA_RETRYIMSLSS_1500756.....	233
6.15.1 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODE 26 WITH T3396 TIMER SET - Code 26	VZ_TC_DATA_RETRYIMSLSS_4105999311931696.....	236

6.15.2 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODE 27 WITH T3396 TIMER SET - Code 27 VZ_TC_DATA_RETRYIMSLESS_4105999311931697	237
7.1 UE RECEIVES DEACTIVATE EPS BEARER CONTEXT REQUEST MESSAGE FROM THE NETWORK 2 PDN CONNECTIONS OPEN VZ_TC_DATA_RETRYIMSLESS_1500764	238
7.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK 1 PDN CONNECTION OPEN VZ_TC_DATA_RETRYIMSLESS_1500765	240
7.3 UE RECEIVES DEACTIVATE EPS BEARER CONTEXT REQUEST MESSAGE FROM THE NETWORK CODE 39 VZ_TC_DATA_RETRYIMSLESS_1500766	242

Patv15S

LTE Data Retry IMS Less VZ_TC_DATARETRYIMSLESS_1500711

Revision History

Rev.	Author	Description of Changes	Date
1.0	Verizon Wireless	Initial release.	October 2016
2.0	Verizon Wireless	Updated Introduction Updates to the following sections: 4.9, 4.12, 4.13, 6.4, 7.1	February 2017
3.0	Verizon Wireless	Updates to the following sections: 4.9, 4.3, 5.3	June 2017
4.0	Verizon Wireless	Add Release 12 scenario in TC 6.6 change applicability for TC 6.12 Updated TC 2.4 and 5.6 Removed Test 2 from TC 4.9	Feb 2018
5.0	Verizon Wireless	Updated TC 6.16	June 2018
6.0	Verizon Wireless	Retire TC 6.17 Updated TC 6.6, 6.15	Oct 2018
7.0	Verizon Wireless	Updated TC 2.3, 2.4 and 4.13	June 2019
8.0	Verizon Wireless	Updated TCs 2.4, 4.13, 5.8, 6.10, 6.13 and 6.15	Oct 2019
9.0	Verizon Wireless	Updated TC 4.13, 5.9, 5.11, 6.16	Feb 2020
10.0	Verizon Wireless	Updated TC 6.13 Retired TC 5.9, 5.11 and 6.16	June 2020
11.0	Verizon Wireless	Updated TC 6.13	October 2020
12.0	Verizon Wireless	Updated TC 2.4	February 2022
13.0	Verizon Wireless	Updated TC 6.13 and 6.15 Added case for NB-IOT in TC 2.4	June 2022
13.1	Verizon Wireless	Updated and Duplicated multiple TCs with a,b & c suffix for different technology variants.	May 2023

14	Verizon Wireless	Updated and Duplicated multiple TCs with a,b & c suffix for different technology variants.	June 2023
15	Verizon Wireless	Changed the numbering of test cases from alphanumeric to numeric	February 2024

Introduction

This test plan applies only to devices that do not support IMS. This includes data-centric CAT-M1 devices and CAT 0 and higher devices that do not support IMS. These devices attach to LTE using the Internet (class 3) APN.

Verizon Wireless requires all devices designed to operate on the Verizon Wireless LTE 3GPP Band 13 network to meet Verizon Wireless specific data retry behavior as detailed in the Verizon Wireless LTE Data Retry Requirements. This document describes the procedure for verifying that these requirements have been met. Verizon Wireless specific data retry requirements and testing are in addition to standard 3GPP LTE requirements and conformance testing defined in 3GPP TS 36.523-1: *Evolved Universal Terrestrial Radio Access (E-UTRA) and Evolved Packet Core (EPC); User Equipment (UE) conformance specification; Part 1: Protocol conformance specification* and 3GPP TS 36.521-3: *Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) conformance specification; Radio transmission and reception; Part 3: Radio Resource Management (RRM) conformance testing*, respectively.

This publication is part of Verizon Wireless compliance with the FCC's rules for 700 MHz C Block (47 C.F.R. § 27.16), as explained in the FCC's Second Report and Order in WT Docket No. 06-150, "Service Rules for the 698-746, 747-762 and 777-792 MHz Bands" released on August 10, 2007.

In this document, the terms LTE (Long Term Evolution) and E-UTRA (Evolved Universal Terrestrial Radio Access) are considered equivalent.

Test Objectives

The objective of this document is to define the Verizon Wireless-specific data retry test procedures for devices designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.

This document will be used by employees of device manufacturers, test labs, and Verizon Wireless to guide the execution of Verizon Wireless specific data retry testing. This document will also be used to define the Verizon Wireless specific data retry test procedures for test automation development.

Definitions

The following terms are used in this document:

Acronym/Term	Definition
3GPP	3rd Generation Partnership Project, manages GSM, EDGE, UMTS, HSPA, and LTE standards
AMF	Authentication Management Field
AUTN	Authentication Token
DUT	Device Under Test
EMM	EPS Mobility Management
EPC	Evolved Packet Core
EPS	Evolved Packet System
ESM	EPS Session Management
E-UTRA	Evolved Universal Terrestrial Radio Access
IMS	IP Multimedia Subsystem
LTE	Long Term Evolution
MAC	Message Authentication Code
NAS	Non Access Stratum
PDN	Packet Data Network
PLMN	Public Land Mobile Network
RFC	Request For Comments

RRC	Radio Resource Control
RRM	Radio Resource Management
SMS	Short Messaging Service
SQN	Sequence Number
TAI	Tracking Area Identifier
UE	User Equipment
VZW	Verizon Wireless

3GPP Release 9 Specifications

Refer to the *3GPP Release 9 Specifications* section of the Verizon Wireless LTE 3GPP Band 13 Network Access Requirements for details on the correct version for all 3GPP specification documents referenced in this test plan.

Entrance Criteria

All vendors shall successfully pass this test plan per the Verizon Wireless LTE 3GPP Band 13 Lab Conformance Test Plan and in accordance with the Verizon Wireless LTE 3GPP Band 13 Device Conformance Test Process. Prior to testing, Verizon Wireless strongly recommends that all devices pass 3GPP standard signaling and RRM conformance per 3GPP TS 36.523-1: *Evolved Universal Terrestrial Radio Access (E-UTRA) and Packet Core; User Equipment (UE) conformance specification; Part 1: Protocol conformance specification* and 3GPP TS 36.521-3: *Evolved Universal Terrestrial Radio Access (E-UTRA; User Equipment (UE) conformance specification Radio transmission and reception; Part 3: Radio Resource Management Conformance Testing*.

Test Equipment Configuration

For details on test equipment currently approved by Verizon Wireless, refer to the Verizon Wireless LTE 3GPP Band 13 Test Equipment List.

The device under test shall support a Test Application to facilitate data retry testing. The Test Application shall connect to the network using the Admin PDN. It shall support at least three states:

1. Application Disconnected: in this state, the UE does not have a connection established to the Admin PDN on behalf of the Test Application. (Note: this is not to be confused with RRC Disconnected. While in the state of "Application Disconnected", the UE may be connected to a PDN on behalf of a different application e.g. the Internet application.)
2. Application Idle: in this state, the UE has a connection established to the Admin PDN but the application is not actively sending data. The UE may be in a state of EMM_IDLE.
3. Application Transmitting: in this state the application is attempting to send data. Because the application is sending data, the UE will either be in the EMM_CONNECTED state or it will attempt to transition to the EMM_CONNECTED state. The application shall support a configurable retransmission timer which dictates how often the application will request retransmissions from the UE if there is a failure.

If the device under test is a device which requires a host computer (e.g. USB dongle), then the test environment shall be a host PC/laptop (with Windows XX Operating System) with a Test Application (the Test Application is TBD at this time) running on the host. If the device under test is a device which operates autonomously, then the device shall support a Test Application to facilitate data retry testing. If the device under test is a device which can operate either autonomously or connected to a host computer, the test environment shall be a host PC/laptop (with Windows XX Operating System) with a Test Application running on the host. The Test Application shall request attempt to connect to the internet for data retry testing; the device, as per device requirements, shall attempt to connect to the internet PDN.

The device under test also shall support an Internet Test Application to facilitate data retry testing. The Internet Test Application shall connect to the network using the Internet PDN. The application shall support a configurable retransmission timer which dictates how often the application will request retransmissions from the UE if there is a failure. The application shall be able to support an aggressive retransmission rate of 1 minute or less.

For NB-IoT device testing, TE vendor should refer to NB-IoT guard-band test frequencies for operating Band 13 from section-8.1.3.1.1 of 3GPP TS 36.508, 3GPP EUTRA and EPC Common Test environments for User Equipment (UE) conformance testing.

Test equipment test scripts shall support the ability to initiate PDN Connectivity Requests for the Internet PDN for data retry testing. Unless otherwise indicated in the test case, the following PLMN values shall be used on the DUT SIM card throughout this test plan:

- PLMN Y1: 311/480. This PLMN shall be configured in the HPLMN and EHPLMN files.
- PLMN Y2: 311/479. This PLMN shall be configured in the OPLMN file.
- PLMN Y3: 311/478. This PLMN shall be configured in the OPLMN file.
- PLMN Y4: 311/481. This PLMN shall be configured in the HPLMN and EHPLMN files.
- PLMN Y5: 311/477. This PLMN shall be configured in the OPLMN file.

Test Results Template

<SW tool 2>	<version>	<mm-dd-yy>

Test No.	Test	Expected	Actual	PASS/FAIL
2.1	RRConnectionReject message: Initial Attach			
2.2	RRConnectionReject message: Sending Data to a Connected PDN			
2.3	Network does not Respond to RACH			
2.4	Multiple RRC Failures			
3.1	UE Fails to Authenticate the Network: Invalid MAC Code			
3.2	UE Fails to Authenticate the Network: Invalid Value for Separation Bit			
3.3	UE Fails to Authenticate the Network: Invalid Value for SQN Field			
3.4	UE Sends "Security Mode Reject" Message: Initial Attach			
4.1	UE Receives Attach Reject message from the Network: Code 19			
4.2	UE Receives Detach Request message from the Network: Codes 3, 6, 7, and 8			
4.3	UE Receives Detach Request message from the Network: Codes 11 and 14			
4.4	UE Receives Detach Request message from			

	the Network: Codes 12, 13, and 15			
4.5	UE Receives Attach Reject message from the Network: Code 17			
4.6	UE with T ₃₃₄₆ Timer Support Receives Attach Reject message from the Network: Code 22			
4.7	UE Receives Attach Reject and PDN Connectivity Reject Messages from the Network			
4.8	UE Receives Attach Reject message from the Network: Codes 95, 96, 97, 99, and 111			
4.9	UE with T ₃₂₄₅ Timer Receives Attach Reject message from the Network: Code 11			
4.10	Permanent Attach Failures Across Power Cycle			
4.11	Permanent EMM Failures Across Power Cycle with Detach Request			
4.12	UE with T ₃₂₄₅ Timer Receives Attach Reject Message from the Network Code 14			
4.13	UE with T ₃₂₄₅ Timer Receives Attach Reject Message from the Network Code 8			
5.1	UE Receive Service Reject Message from the Network Code 11			
5.2	UE Receives Service Reject message from the Network: Codes 12, 13, and 15			
5.3	Service Request Fails: Throttling Algorithm Invoked			
5.4	UE Receives Service Reject message from the Network: Code 17			
5.5	UE Receives Tracking Area Update Reject message from the Network: Codes 12, 13, and 15			
5.6	Tracking Area Update Request Fails: Tracking Area Update Attempt Counter Reaches Max Value			
5.7	UE Receives Tracking Area Update Reject message from the Network: Code 17			
5.8	UE with T ₃₃₄₆ Timer Support Receives Service Reject Message from the Network: Code 22			
5.10	UE with T ₃₃₄₆ Timer Support Receives Tracking Area Update Reject Message from the Network: Code 22			
5.12	Permanent EMM Failures Across Power Cycle with Service Request			
5.13	Permanent EMM Failures Across Power Cycle with Tracking Area Update			
6.1	Network Fails to Refresh the IPv6 Address for the Internet PDN, No IPv4 Address Assigned			
6.2	Network Fails to Assign an IPv6 Address for the Admin PDN- Initial Connection, no IPv4 address assigned			

6.3	Network Fails to Assign an IPv6 Address for the Admin PDN- Initial Connection, IPv4 address assigned			
6.4	UE Receives PDN Connectivity Reject message from the Network for the Internet PDN- Subsequent Attachment			
6.5	UE Receives PDN Connectivity Reject message from the Network for Admin PDN: Codes 26, 30, 31, 34, 38, 95, 96, 97, 98, 99, 100, 101, and 111			
6.6	UE Receives PDN Connectivity Reject message from the Network for Admin PDN: Codes 8, 27, 29, 32, 33, and 112			
6.7	UE Receives PDN Connectivity Reject message from the Network for Internet PDN: Codes 8, 27, 29, 32, 33, and 112			
6.8	Network Fails to Respond to PDN Connectivity Request			
6.9	Network Fails to Refresh the IPv6 Address for the Internet PDN, IPv4 Address Assigned			
6.10	Network Fails to Assign an IPv6 Address for the Internet PDN on Network Attach, IPv4 Address Assigned on Internet			
6.12	UE Receives PDN Connectivity Reject message from the Network for ADMIN PDN: Code 33			
6.13	UE Makes Excessive PDN Connectivity Requests			
6.14	UE Makes Attach Request while Throttling on PDN			
6.15	UE Receives PDN Connectivity Reject message from the Network for Admin PDN: Codes 26 and 27 with T3396 Timer Set			
6.16	IoT UE Receives PDN Connectivity Reject Message from the Network for Internet PDN Codes 8, 27, 29, 32, and 33			
6.17	UE Receives PDN Connectivity Reject Message from the Network for Non-IMS PDN Code 55			
7.1	UE Receives Deactivate EPS Bearer Context Request message from the Network: 2 PDN Connections Open			
7.2	UE Receives Detach Request message from the Network: 1 PDN Connection Open			
7.3	UE Receives Deactivate EPS Bearer Context Request message from the Network: Code 39

2.1 RRCConnectionReject Message Initial Attach

VZ_TC_DATA_RETRY_IMSLESS_1500713

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network responds to an RRCConnectionRequest message with an RRCConnectionReject message. This test verifies UE behavior when the RRCConnectionReject message is received during the UEs initial attempt to attach to the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.1.4</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test equipment to respond to all RRCConnectionRequest messages with an RRCConnectionReject message. Configure the test equipment such that the value for waitTime in the RRCConnectionReject message is 10 seconds. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. Power the DUT on and allow it to find LTE service. Verify that the DUT attempts to attach to the LTE network and that the network responds to

the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime value of 10 seconds.

5. Verify that after 10 seconds, the DUT attempts to attach to the LTE network a second time and that the network responds to the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime value of 10 seconds.
6. Re-configure the LTE network emulator to allow the RRC connection setup to succeed.
7. After T₃₀₂ expires, verify that the DUT attempts to establish an RRC connection and that the network accepts the RRC connection. Verify that the DUT attempts to attach to the LTE network and that the network accepts the attach.

Expected Results

The UE waits at least waitTime seconds between transmissions of RRC connection attempts.

2.2 RRC CONNECTION REJECT MESSAGE SENDING DATA TO A CONNECTED PDN

VZ_TC_DATA_RETRY_IMS_LESS_1500714

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network responds to an RRCConnectionRequest message with an RRCConnectionReject message. This test verifies UE behavior when the RRCConnectionReject message is received while the UE is attempting to send data to a PDN that has previously been connected.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.1.4</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test equipment so that all attachments and connections are allowed. 2. Power the DUT on and allow it to find LTE service. 3. Verify that the DUT successfully attaches to the LTE network. 4. Initiate the test application that can be configured to aggressively attempt to connect to the network using the Admin PDN (see section 1.5). 5. Verify that the UE is successful in connecting to the Admin PDN on behalf of the test application. Configure the application to the application idle state. 6. Force the DUT to the RRC IDLE state by having the network transmit an

RRCCConnectionRelease message.

7. Re-configure the test equipment to respond to all RRCCConnectionRequest messages with an RRCCConnectionReject message. Configure the test equipment such that the value for waitTime in the RRCCConnectionReject message is 10 seconds.
8. Switch the test application to the application transmitting state and set the retransmission timer to 5 seconds.
9. Verify that the DUT attempts to connect to the LTE network and the network responds to the RRCCConnectionRequest message with an RRCCConnectionReject message with a waitTime value of 10 seconds.
10. Verify that after 10 seconds, the DUT attempts to attach to the LTE network a second time and that the network responds to the RRCCConnectionRequest message with an RRCCConnectionReject message with a waitTime value of 10 seconds..
11. Verify that after 10 seconds, the DUT attempts to attach to the LTE network a third time and that the network responds to the RRCCConnectionRequest message with an RRCCConnectionReject message with a waitTime value of 10 seconds.
12. Re-configure the LTE network emulator to allow the RRC connection setup to succeed
13. Once the T302 (10 second) timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay and that the network allows the connection. Configure the application to the application idle state.
14. Force the DUT to the RRC IDLE state by having the network transmit an RRCCConnectionRelease message.
15. Switch the test application to the application transmitting state.
16. Verify that the UE attempts to connect upon the next request of the test application with no delay and that the network allows the connection.

Expected Results

The UE waits at least waitTime seconds between transmissions of RRC connection attempts.

2.3 NETWORK DOES NOT RESPOND TO RACH VZ_TC_DATA_RETRY_IMS_LESS_1500715

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network does not respond to the RACH from the UE.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. 2. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 3. Power the DUT on and allow it to find LTE service 4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T3402 timer set to 4 minutes.

5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network does not respond to RACH attempts from the UE.
8. Verify that the UE sends a RACH request in an attempt to re-attach to the LTE network.
9. Verify that the LTE network does not respond to the RACH attempt.
10. Verify that the UE sends a RACH request message 4 more times with each message separated by at least T₃₄₁₁ seconds.
11. After the fifth attempt fails, verify that the UE does not make a RACH attempt for at least T₃₄₀₂ minutes.
12. While the T₃₄₀₂ timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₂ where Y₂ is not equal to Y₁. The frequency of the second PLMN shall be the same as the first. The network should still be configured to not respond to RACH attempts from the UE.
13. Verify that the UE sends a RACH request to the LTE network.
14. Verify that the LTE network does not respond to the RACH attempt.
15. Verify that the UE sends a RACH request message 4 more times with each message separated by at least T₃₄₁₁ seconds.
16. After the fifth attempt fails, verify that the UE does not make a RACH attempt for at least T₃₄₀₂ minutes.
17. While the second T₃₄₀₂ timer is running, re-configure the network so that the UE again finds service on PLMN Y₁. Verify that the UE does not send a series of RACH attempts to the network until the expiration of the original T₃₄₀₂ timer. **Note** : If UE support LTE only RAT , then UE may attempt to attach to the Network without waiting for the original T₃₄₀₂ timer to expire.

Expected Results

The UE applies its attach attempt counter and throttling as defined in ***section Situation: UE Encounters RRC Failures During an Attach Attempt*** of the Verizon Wireless LTE Data Retry Requirements.

2.4 MULTIPLE RRC FAILURES VZ_TC_DATA_RETRY_IMS_LESS_1500716

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE encounters multiple RRC failures.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. Configure the test equipment so that connEstFailOffset in SIB2 is set to 0. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. Power the DUT on and allow it to find LTE service Verify that the DUT sends an Attach Request and that the network responds with an Attach

- Accept with the T_{3402} timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE..
 6. Verify that the DUT detaches from the LTE network.
 7. Configure the test equipment such that the network does not respond to RACH attempts from the UE (i.e., ignores the random access preamble).
 8. Verify that the UE sends a RACH request in an attempt to re-attach to the LTE network.
 9. Verify that the LTE network does not respond to the RACH attempt.
 10. Verify that after T_{3411} seconds the DUT attempts to attach to the LTE network a second time and that the LTE network does not respond to the RACH attempt. This is considered Retry #1.
 11. Verify that after T_{3411} seconds the DUT attempts to attach to the LTE network a third time and that the network ignores the random access preamble. This is considered Retry #2.
 12. Verify that after T_{3411} seconds the DUT attempts to attach to the LTE network a fourth time and that the network ignores the random access preamble. This is considered Retry #3.
 13. After the random access procedure fails due to timeout (i.e. UE exceeds *preambleTransMax*), re-configure the network emulator such that the network emulator responds to the RACH and allows the random access procedure to complete. Also configure the test equipment to respond to all RRCConnectionRequest messages with an RRCConnectionReject message. The value for waitTime in the RRCConnectionReject message shall be set to 10 seconds. [Note: TE shall configure extendedWaitTimer for NB-IoT devices only]
 14. Verify that the DUT attempts to attach to the LTE network and that the network responds to the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime value of 10 seconds. [Note: the device attach counter should *not* be incremented upon reception of an RRCConnectionReject message.]
 15. Verify that after 10 seconds, the DUT attempts to attach to the LTE network and that the network responds to the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime of 10 seconds
 16. Case-A (For Devices except Case-B) , perform the following steps:
 1. While the T_{302} timer is running, re-configure the network to accept RRCConnectionRequests but to not respond to RACH attempts from the UE (i.e., ignores the random access preamble).
 2. Verify that after T_{302} expires, the UE sends a RACH request to the LTE network and that the network ignores the random access preamble. This is considered Retry #4. The **attach** counter should now have reached a value of 5.

3. After the fourth retry attempt fails, verify that the next attach attempt does not occur for T_{3402} minutes.
 4. While the T_{3402} timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y_2 where Y_2 is not equal to Y_1 . The frequency of the second PLMN shall be the same as the first. The network should still be configured to not respond to RACH attempts from the UE.
 5. Verify that the UE attempts to attach to the network without waiting for the T_{3402} timer to expire.
 6. Re-configure the network so that the UE again finds service on PLMN Y_1 . Verify that the UE does not attempt to attach to the network until the expiration of the original T_{3402} timer. **Note** : If UE support LTE only RAT , then UE may attempt to attach to the Network without waiting for the original T_{3402} timer to expire.
 7. Once the T_{3402} timer expires, verify that the DUT attempts to attach to the LTE network and that the network ignores the random access preamble.
17. Case-B : NBIOT (or Others if configured for NAS signaling Low priority) UEs, perform the following steps:
1. While the T_{3346} timer is running, re-configure the network to accept RRCConnectionRequests but to not respond to RACH attempts from the UE (i.e., ignores the random access preamble).
 2. Verify that after T_{3346} expires, the UE sends a RACH request to the LTE network and that the network ignores the random access preamble. This is considered Retry #1.
 3. Verify that after T_{3411} seconds, UE sends an attach attempt to the LTE network and that the LTE network does not respond to the RACH attempt.

4. While the T_{3411} timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y_2 where Y_2 is not equal to Y_1 . The frequency of the second PLMN shall be the same as the first. The network should still be configured to not respond to RACH attempts from the UE.
 5. Verify that the UE attempts to attach to the network.
 6. Re-configure the network so that the UE again finds service on PLMN Y_1 and that accept the attach request from the UE. Verify that the UE sends an attach attempt to the network and it is accepted by the network.
18. Power the device off.

Expected Results
The UE applies attach attempt throttling as defined in section 4.3.1 of the Verizon Wireless LTE Data Retry Requirements.

3.1 UE FAILS TO AUTHENTICATE THE NETWORK INVALID MAC CODE

VZ_TC_DATA_RETRY_IMS_LESS_1500717

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE is unable to authenticate the network because of an invalid MAC code in the NAS Authentication Request message.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.2.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the DUT finds service on a single eNodeB with cell id equal to value X1 and PLMN id equal to value Y1. 2. Configure the test equipment such that the MAC code in the AUTN information element of the NAS Authentication Request message is set to an invalid value. 3. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 4. Power the DUT on and allow it to find LTE service. 5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach

Request message.

6. Verify that, during the authentication portion of the attachment process, the network sends a NAS Authentication Request message in which the MAC code in the AUTN information element is set to an invalid value.
7. Verify that the UE sends a NAS Authentication Failure message to the network in which the EMM cause code is #20 (MAC failure).
8. Ensure that the network does not transmit another NAS Authentication Request message for at least 25 seconds which will cause timer T3418 to expire.
9. Monitor the DUT for more than 5 minutes and verify that it does not attempt to attach to the LTE network for at least 300 seconds after the initial failure.
10. Attempt to initiate a connection to the Admin PDN from the DUT.
11. Verify that the DUT attempts to connect to that eNodeB. (Note: this attempt may be suppressed if the Internet application made a second attempt and the device began a new 300 second timer).
12. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell id equal to value X2 where X2 is not equal to X1, X1 and X2 are on the same frequency. The PLMN id is still equal to Y1.
13. Verify that the DUT attempts to attach to the LTE network on the new eNodeB.
14. Re-run the test with the following exception: at step 12.), configure the eNodeB such that the cell id equal to X1 and change the PLMN id to value Y2 where Y2 is not equal to Y1. The frequency of the second PLMN shall be the same as the first.
15. Verify that the DUT attempts to attach to the LTE network on the new eNodeB.

Expected Results

UE does not attempt any further connections with an LTE eNodeB for 300 seconds if it is unable to authenticate the network. UE will attempt connections on a different eNodeB.

3.1.1 UE fails to authenticate to the NW - Invalid MAC - T1

3.2 UE FAILS TO AUTHENTICATE THE NETWORK INVALID VALUE FOR SEPARATION BIT VZ_TC_DATA_RETRY_IMSLESS_1500718

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE is unable to authenticate the network because of an invalid value for the separation bit in the AMF field of the AUTN information element in the NAS Authentication Request message. It verifies that a power cycle of the device will clear throttling behavior.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.2.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the DUT finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1 and PLMN id equal to value Y1. 2. Configure the test equipment such that the separation bit in the AMF field of the AUTN information element in the NAS Authentication Request message is set to a value of 0. 3. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
6. Verify that, during the authentication portion of the attachment process, the network sends a NAS Authentication Request message in which the AMF field in the AUTN information element is set to a value of 0.
7. Verify that the UE sends a NAS Authentication Failure message to the network with EMM Cause Code #26 "Non-EPS authentication not acceptable".
8. Ensure that the network does not transmit any further UE-directed NAS messages for at least 25 seconds which will cause timer T₃₄₁₈ to expire.
9. Monitor the DUT for more than 5 minutes and verify that it does not attempt to attach to the LTE network for at least 300 seconds after the initial failure.
10. Attempt to initiate a connection to the Admin PDN from the DUT.
11. Verify that the DUT attempts to connect to the LTE network. (Note: this attempt may be suppressed if the Internet application made a second attempt and the device began a new 300 second timer).
12. Cycle the power on the DUT (turn the device off and then back on again). Verify that the UE finds service on the same eNodeB, that the UE attempts to attach, and that during the authentication portion of the attachment process, the network sends a NAS Authentication Request message in which the AMF field in the AUTN information element is set to a value of 0.
13. Verify that the UE sends a NAS Authentication Failure message to the network with EMM Cause Code #26 "Non-EPS authentication not acceptable".
14. Ensure that the network does not transmit any further UE-directed messages for at least 25 seconds which will cause timer T₃₄₁₈ to expire.
15. Monitor the DUT for 5 minutes and verify that it does not attempt to attach to the LTE network.
16. Attempt to initiate a connection to the Admin PDN from the DUT.
17. Verify that the DUT does attempts to connect to the LTE network. (Note: this attempt may be suppressed if the Internet application made a second attempt and the device began a new 300 second timer).
18. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell id equal to value X₂ where X₂ is not equal to X₁. X₁ and X₂ are on the same frequency. The PLMN id is still equal to Y₁.
19. Verify that the DUT attempts to attach to the LTE network on the new eNodeB.

Expected Results

UE does not attempt any further connections with an LTE eNodeB for at least 300 seconds if it is unable to authenticate the network until power cycle. UE will attempt connections on a different eNodeB.

PatV15S

3.3 UE FAILS TO AUTHENTICATE THE NETWORK INVALID VALUE FOR SQN FIELD VZ_TC_DATA_RETRY_IMS_LESS_1500719

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE is unable to authenticate the network because of an invalid value for the SQN field of the AUTN information element in the NAS Authentication Request message.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.2.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the DUT finds service on a single eNodeB with cell id equal to value X1 and PLMN id equal to value Y1. 2. Configure the test equipment such that the SQN field of the AUTN information element in the NAS Authentication Request message is set to an invalid value. 3. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 4. Power the DUT on and allow it to find LTE service. 5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach

Request message.

6. Verify that, during the authentication portion of the attachment process, the network sends a NAS Authentication Request message in which the SQN code in the AUTN information element is set to an invalid value.
7. Verify that the UE sends a NAS Authentication Failure message to the network with an EMM cause code of #21 "Sync failure".
8. Ensure that the network does not transmit any further UE-directed NAS messages for at least 25 seconds which will cause timer T₃₄₂₀ to expire.
9. Monitor the DUT for at least 5 minutes and verify that it does not attempt to attach to the LTE network for at least 300 seconds after the initial failure.
10. Attempt to initiate a connection to the Admin PDN from the DUT.
11. Verify that the DUT attempts to connect to the LTE network. (Note: this attempt may be suppressed if the Internet application made a second attempt and the device began a new 300 second timer).
12. Reconfigure the test setup so that attach attempts will succeed and the UE will now successfully authenticate the network.
13. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell id equal to value X₂ where X₂ is not equal to X₁. X₁ and X₂ are on the same frequency. The PLMN id is still equal to Y₁.
14. Verify that the DUT attempts to attach to the LTE network on the new eNodeB.
15. Verify that the DUT is successful in attaching to the network and connecting to the Internet PDN.
16. Reconfigure the test setup so that the DUT finds service on the original eNodeB (cell id = X₁, PLMN id = Y₁).
17. Attempt to initiate a connection to the Admin PDN from the DUT. Configure the test application for the application transmitting state with a retransmission timer set to 10 seconds.
18. Verify that the DUT does not attempt to connect to the LTE network until at least 5 minutes after the previous failure.

Expected Results

UE does not attempt any further connections with an LTE eNodeB for at least 300 seconds if it is unable to authenticate the network. UE will attempt connections on a different eNodeB.

3.4 UE SENDS SECURITY MODE REJECT MESSAGE INITIAL ATTACH

VZ_TC_DATA_RETRY_IMSLESS_1500720

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE sends a NAS Security Mode Reject message to the network in response to a NAS Security Mode Command message. This test applies to the situation in which the UE is attempting an initial attach.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.2.2</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with PLMN id equal to value Y1. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. 2. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 3. Power the DUT on and allow it to find LTE service 4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T3402 timer set to 4 minutes.

5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network proposes capabilities that the UE does not support when sending a NAS Security Mode Command message.
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network sends a NAS Authentication Request message and that the UE responds by sending a NAS Authentication Response message.
10. Verify that the network then sends a NAS Security Mode Command message and that the UE sends a NAS Security Mode Reject message.
11. Verify that the attachment attempt is aborted by the network per 3GPP TS24.301.
12. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**). Configure the test application for the application transmitting state with a retransmission timer set to 10 seconds.
13. Verify that the UE attempts to attach on behalf of the test application (or on behalf of the Internet application) after a time defined by timer T₃₄₁₁. Verify that the UE again sends a NAS Security Mode Reject message during the Authentication/Security stage of the attach process and the network aborts the attachment attempt. This is considered Retry #1.
14. Verify that the UE again attempts to attach on behalf of the test application (or on behalf of the Internet application) after waiting at least T₃₄₁₁ seconds. Verify that the UE again sends a NAS Security Mode Reject message during the Authentication/Security stage of the attach process and the network aborts the attachment attempt. This is considered Retry #2.
15. Verify that the UE again attempts to attach on behalf of the test application (or on behalf of the Internet application) after waiting at least T₃₄₁₁ seconds. Verify that the UE again sends a NAS Security Mode Reject message during the Authentication/Security stage of the attach process and then abandons the attachment attempt. This is considered Retry #3.
16. Verify that the UE again attempts to attach on behalf of the test application (or on behalf of the Internet application) after waiting at least T₃₄₁₁ seconds. Verify that the UE again sends a NAS Security Mode Reject message during the Authentication/Security stage of the attach process and then abandons the attachment attempt. This is considered Retry #4. The attach counter should now have reached a value of 5.
17. After the fourth retry attempt fails, verify that the next attempt does not occur for T₃₄₀₂ minutes (4 minutes).
18. Verify that the UE sends a second cluster of 5 more attach requests with each individual attempt separated by at least T₃₄₁₁ seconds. After that, verify that the UE sends no additional attach attempts for at least T₃₄₀₂ minutes (4 minutes).

Expected Results
UE follows the data retry algorithm described in the document "Verizon Wireless LTE Data Retry" when it sends a NAS Security mode Reject message during the initial attach process.

Patvi15s

4.1 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK

CODE 19 VZ_TC_DATA_RETRY_IMSLESS_1500727

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Attach Reject message while attempting to attach to the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE 3GPP Band 13 Network Access, Section 3.2.6</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that timer T3411 is set to 10 seconds. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. 2. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 3. Power the DUT on and allow it to find LTE service

4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 19. Configure the test equipment such that the network will respond to a piggybacked PDN connectivity request by sending a NAS PDN Connectivity Reject message with an ESM Cause Code equal to 54.
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 54.
10. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request."
11. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 54.
12. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request."
13. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 54.
14. Verify the DUT does not send an Attach Request while T₃₄₀₂ is running.

Expected Results

UE sets the attach attempt counter to 5 after receiving 3 NAS Attach Reject messages with EMM Cause Code of 19. The first three attachment attempts are separated by T₃₄₁₁ seconds. The next attempt does not occur for at least T₃₄₀₂ minutes

4.2 UE RECEIVES DETACH REQUEST MESSAGE FROM THE NETWORK CODES 3, 6, 7, AND 8 VZ_TC_DATA_RETRY_IMS_LESS_1500728

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Detach Request message from the network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.3.3</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach successfully. 3. Power the DUT on and allow it to find LTE service. 4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network. 5. From the network, send a NAS Detach Request message to the DUT. Configure the message such that re-attach is not required and the EMM Cause Code is set to 3. Verify that the UE

sends a Detach Accept message.

6. Monitor the DUT for 5 minutes and verify that it does not attempt to attach to the LTE network.
7. Attempt to initiate a connection to the Internet PDN from the DUT.
8. Verify that the DUT does not attempt to connect to the LTE network.
9. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y1.
10. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
11. Attempt to initiate a connection to the Admin PDN from the DUT.
12. Verify that the DUT does not attempt to connect to the LTE network.
13. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y1. The frequency of the second PLMN shall be the same as the first.
14. Verify that the DUT does not attempt to attach to the LTE network on the new network.
15. Attempt to initiate a connection to the Admin PDN from the DUT.
16. Verify that the DUT does not attempt to connect to the LTE network.
17. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z2 where Z2 is not equal to Z1.
18. Verify that the DUT does not attempt to attach to the LTE network on the new network.
19. Attempt to initiate a connection to the Admin PDN from the DUT.
20. Verify that the DUT does not attempt to connect to the LTE network.
21. Power cycle the DUT.
22. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
23. Verify that the DUT attaches to the LTE network successfully.
24. Attempt to initiate a connection to the Admin PDN from the DUT.
25. Verify that the DUT connects to the Admin PDN.
26. Power the device off.
27. Repeat the test for EMM Cause Codes of 3, 6, 7, and 8.

Expected Results

UE does not attempt any further connections with an LTE system if it receives a NAS Detach Request message with cause codes 3, 6, 7, or 8.

Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y3, and TAI equal to value Z1. The PLMN Y3 shall not be a home PLMN. 2. Configure the test equipment such that the network will allow the UE to attach successfully. 3. Power the DUT on and allow it to find LTE service. 4. Verify that the DUT successfully establishes an RRC connection, attaches to the LTE network, and connects to the Internet PDN using PDN Type IPv4 5. . From the network, send a NAS Detach Request message to the DUT. Configure the

- message such that re-attach is not required and the EMM Cause Code is set to 11. Verify that the UE sends a Detach Accept message.
6. Monitor the DUT for 5 minutes and verify that it does not attempt to attach to the LTE network.
 7. Attempt to initiate a connection to the Admin PDN from the DUT.
 8. Verify that the DUT does not attempt to connect to the LTE network.
 9. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y3.
 10. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
 11. Attempt to initiate a connection to the Admin PDN from the DUT.
 12. Verify that the DUT does not attempt to connect to the LTE network.
 13. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y3.
 14. Verify that the DUT does not attempt to attach to the LTE network on the new Tracking Area.
 15. Attempt to initiate a connection to the Admin PDN from the DUT.
 16. Verify that the DUT does not attempt to connect to the LTE network.
 17. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y3. The frequency of the second PLMN shall be the same as the first.
 18. Verify that the DUT now attempts to attach to the LTE network and is successful.
 19. Verify that the DUT connects to the Internet PDN.
 20. Reconfigure the test setup so that the DUT again finds service on the original PLMN (with id equal to value Y3).
 21. Verify that the DUT does not attempt to attach on PLMN Y1.
 22. Power the device off.
 23. Change the PLMN identifier to a new value, Y5. The PLMN Y5 shall not be a home PLMN.
 24. Repeat the test for EMM Cause Code of 14. When the test is repeated, use value Y5 instead of Y3. This is done in case the device is still storing PLMN Y3 on the forbidden list.

Expected Results

UE does not attempt any further connections within a roaming PLMN if it receives a NAS Detach Request message with cause codes 11 or 14.

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Detach Request message from the network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.3.3</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach successfully. 3. Power the DUT on and allow it to find LTE service. 4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network. 5. From the network, send a NAS Detach Request message to the DUT. Configure the message such that re-attach is not required and the EMM Cause Code is set to 12. Verify that the UE

sends a Detach Accept message.

6. Monitor the DUT for 5 minutes and verify that it does not attempt to re-attach to the LTE network.
7. Attempt to initiate a connection to the Admin PDN from the DUT.
8. Verify that the DUT does not attempt to connect to the LTE network.
9. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y1. The TAI is still equal to Z1.
10. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
11. Attempt to initiate a connection to the Admin PDN from the DUT.
12. Verify that the DUT does not attempt to connect to the LTE network.
13. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y1.
14. Verify that the DUT now attempts to attach to the LTE network and is successful.
15. Attempt to initiate a connection to the Admin PDN from the DUT.
16. Verify that the DUT connects to the Admin PDN.
17. Reconfigure the test setup so that the DUT again finds service on the original TAI (with id equal to value Z1).
18. Verify that the DUT does not attempt to attach on TAI Z1.
19. Power the device off.
20. Repeat the test for EMM Cause Codes of 13 and 15.

Expected Results

UE does not attempt any further connections within a TAI if it receives a NAS Detach Request message with cause codes 12, 13, or 15.

Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that timer T3411 is set to 10 seconds. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. 2. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network. 3. Power the DUT on and allow it to find LTE service

4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 17..
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 17.
10. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 17.
11. Verify that the UE attempts to attach 3 more times with each attempt separated by at least T₃₄₁₁ seconds.
12. After the fifth attempt fails, verify the UE does not send an Attach Request while T₃₄₀₂ is running.

Expected Results

After receiving the NAS Attach Reject message, the UE attempts to attach 4 more times with each attempt separated by at least T₃₄₁₁ seconds. After the fifth attempt fails, the next attempt does not occur for at least T₃₄₀₂ minutes.

4.6 UE WITH T₃₃₄₆ TIMER SUPPORT RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 22

VZ_TC_DATA_RETRY_IMS_LESS_1500721

<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Attach Reject message while attempting to attach to the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.3.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3, Release 10 or later.</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies only to UEs with T₃₃₄₆ timer support designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that timer T₃₄₁₁ is set to 10 seconds. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 22 and a T₃₃₄₆ Timer value set to 15 minutes. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach

Request message.

5. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 22.
6. Verify that the UE does not re-issue an Attach Request while the T_{3346} timer is running.
7. While the T_{3346} timer is running, power cycle the UE.
8. Verify that the UE does not issue an Attach Request.
9. While the T_{3346} timer is running, re-configure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z_2 where Z_2 is not equal to Z_1 , and Z_2 is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y_1 .
10. Verify that the UE does not issue an Attach Request.
11. While the T_{3346} timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y_2 where Y_2 is not equal to Y_1 . PLMN Y_2 shall not be a home PLMN. The frequency of the second PLMN shall be the same as the first. T_{3346} shall not be running in this second PLMN.
12. Verify that the UE successfully attaches to the LTE network and connects to the Internet PDN using PDN Type IPv4.
13. While the T_{3346} timer is running, re-configure the test setup so that the DUT again finds service on PLMN Y_1 .
14. Verify that the UE issues an Attach Request without waiting for T_{3346} to expire.
15. Power the UE off.

Expected Results

After receiving the NAS Attach Reject message, the UE waits T_{3346} minutes before its next attach attempt in that PLMN. If the UE enters a new PLMN, it shall stop timer T_{3346} before issuing an attach attempt in that PLMN.

4.7 UE RECEIVES ATTACH REJECT AND PDN CONNECTIVITY REJECT MESSAGES FROM THE NETWORK VZ_TC_DATA_RETRY_IMS_LESS_1500722

Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that timer T3411 is set to 10 seconds. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

3. Power the DUT on and allow it to find LTE service
4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE..
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 19 and the T₃₄₀₂ timer set to 4 minutes. Configure the test equipment such that the network will respond to a piggybacked PDN connectivity request by sending a NAS PDN Connectivity Reject message with an ESM Cause Code equal to 26. Note that the T₃₃₉₆ Value IE is not included in the PDN Connectivity Reject message.
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
10. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
11. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
12. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
13. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
14. Monitor the DUT and verify that it does not attempt to attach to the LTE network for at least T₃₄₀₂ minutes (4 minutes).
15. After T₃₄₀₂ expires, verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
16. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.

17. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
18. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
19. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
20. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
21. Monitor the DUT and verify that it does not attempt to attach to the LTE network for at least T₃₄₀₂ minutes (4 minutes).
22. While the T₃₄₀₂ timer is running, re-configure the network so that the network accepts the attach request and PDN connectivity request.
23. After T₃₄₀₂ expires, verify that the DUT attempts to attach to the LTE network using the Internet PDN, and that the network accepts the requests.

Expected Results

UE sets the attach attempt counter to 5 after receiving 3 NAS Attach Reject messages with EMM Cause Code of 19. The first three attachment attempts are separated by T₃₄₁₁ seconds. The next attempt does not occur for at least T₃₄₀₂ minutes (4 minutes).

4.8 UE RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODES 95, 96, 97, 99, AND 111 VZ_TC_DATA_RETRY_IMS_LESS_1500723

4.9 UE WITH T₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 11

VZ_TC_DATA_RETRY_IMS_LESS_1500724

Description

Definition

This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE with T₃₂₄₅ timer enabled receives a NAS Attach Reject message with cause code 11 while attempting to attach to the LTE network.

Traceability

- Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements,
- Verizon Wireless LTE Data Retry Device Requirements, *Section 3.8*
- 3GPP TS 24.301: *Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3*
- 3GPP TS 36.331: *Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification*

Applicability

These test cases apply to UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network. Test Case 1 applies only to devices capable of determining the time elapsed between switch off and switch on. Test Case 2 applies only to devices that are not capable of determining the time elapsed between switch off and switch on.

Design Steps

Step Name

Step 1 - Test 1

Pre-Conditions

Procedures

Test Procedure--Test 1

1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y2, and TAI equal to value Z1. The PLMN Y2 shall not be a home PLMN.
2. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 11.

3. Configure the USIM on the DUT such that the Timer T₃₂₄₅ Behaviour parameter in the EFNASConfig file is enabled.
4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message and requests a connection to the Internet PDN using PDN Type IPv4..
6. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 11.
7. Set a timer for 15 minutes and execute the following steps 8 through 22 within the 15 minutes.
8. Verify that the DUT does not attempt to attach to the LTE network after receiving the NAS Attach Reject message.
9. Attempt to initiate a connection to the Admin PDN from the DUT.
10. Verify that the DUT does not attempt to connect to the LTE network.
11. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X₂ where X₂ is not equal to X₁. X₁ and X₂ are on the same frequency. The PLMN id is still equal to Y₂.
12. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
13. Attempt to initiate a connection to the Admin PDN from the DUT.
14. Verify that the DUT does not attempt to connect to the LTE network.
15. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z₂ where Z₂ is not equal to Z₁. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y₂.
16. Verify that the DUT does not attempt to attach to the LTE network on the new Tracking Area.
17. Attempt to initiate a connection to the Admin PDN from the DUT.
18. Verify that the DUT does not attempt to connect to the LTE network.
19. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y₃ where Y₃ is not equal to Y₂. The frequency of the second PLMN may or may not be the same as the first. Configure the test equipment such that the network will allow attachment on PLMN Y₃.
20. Verify that the DUT now attempts to attach to the LTE network and is successful.
21. Verify that the DUT connects to the Internet PDN using PDN Type IPv4.
22. Reconfigure the test setup so that the DUT again finds service on the original PLMN (with id equal to value Y₂).
23. Verify that the DUT does not attempt to attach on PLMN Y₂ for the remaining duration of the 15 minute timer.
24. For release 12 and earlier UEs, perform the following steps:
 1. Power the device off and turn off the test script, and keep the device and test script off

- for 23 hours and 30 minutes.
 2. After 23 hours and 30 minutes have elapsed, resume the test script then power the device on.
 3. Monitor the device for 15 minutes and verify that it does not attempt to attach on PLMN Y2. (At this point, the device shall have refrained from attaching to PLMN Y2 for 24 hours since the initial NAS Attach Reject message.)
 4. Power the device off and turn off the test script, and keep the device and test script off for an additional 24 hours.
 5. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y2.
 6. After 24 hours have expired, resume the test script then power the device on, and verify that the device successfully attaches to the LTE network.
 7. Verify that the DUT connects to the Internet PDN using PDN Type IPv4.
 8. Power the device off.
25. For release 13 or later UEs, perform the following steps:
1. Power the device off and turn off the test script, and keep the device and test script off for 11 hours and 30 minutes.
 2. After 11 hours and 30 minutes have elapsed, resume the test script then power the device on.
 3. Monitor the device for 15 minutes and verify that it does not attempt to attach on PLMN Y2. (At this point, the device shall have refrained from attaching to PLMN Y2 for 12 hours since the initial NAS Attach Reject message.)
 4. Power the device off and turn off the test script, and keep the device and test script off for an additional 12 hours.
 5. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y2.
 6. After 12 hours have expired, resume the test script then power the device on, and verify that the device successfully attaches to the LTE network.
 7. Verify that the DUT connects to the Internet PDN using PDN Type IPv4.
 8. Power the device off.

Expected Results

A release 12 or earlier UE configured for timer T₃₂₄₅ does not attempt any further connections within a roaming PLMN for at least 24 hours but no more than 48 hours if it receives a NAS Attach Reject message with cause code 11.

A release 13 or later UE configured for timer T₃₂₄₅ does not attempt any further connections within

a roaming PLMN for at least 24 hours but no more than 48 hours if it receives a NAS Attach Reject message with cause code 11.

Design Steps

Step 2 - Test 2

Pre-Conditions

Procedures

Test Procedure--Test 2

1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y3, and TAI equal to value Z1. The PLMN Y3 shall not be a home PLMN.
2. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 11.
3. Configure the USIM on the DUT such that the Timer T3245 Behaviour parameter in the EFNASConfig file is enabled.
4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
6. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 11.
7. Set a timer for 15 minutes and execute the following steps 8 through 22 within the 15 minutes.
8. Verify that the DUT does not attempt to attach to the LTE network after receiving the NAS Attach Reject message.
9. Attempt to initiate a connection to the Admin PDN from the DUT.
10. Verify that the DUT does not attempt to connect to the LTE network.
11. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y3.
12. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
13. Attempt to initiate a connection to the Admin PDN from the DUT.
14. Verify that the DUT does not attempt to connect to the LTE network.

15. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y3.
16. Verify that the DUT does not attempt to attach to the LTE network on the new Tracking Area.
17. Attempt to initiate a connection to the Admin PDN from the DUT.
18. Verify that the DUT does not attempt to connect to the LTE network.
19. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y3. The frequency of the second PLMN may or may not be the same as the first. Configure the test equipment such that the network will allow attachment on PLMN Y2.
20. Verify that the DUT now attempts to attach to the LTE network and is successful.
21. Reconfigure the test setup so that the DUT again finds service on the original PLMN (with id equal to value Y3).
22. Verify that the DUT does not attempt to attach on PLMN Y3 for the remaining duration of the 15 minute timer.
23. For release 12 and earlier UEs, perform the following steps:
 1. Power the device off, and then power the device on.
 2. Monitor the device for 23 hours 45 minutes and verify that it does not attempt to attach on PLMN Y3. (At this point, the device shall have refrained from attaching to PLMN Y3 for 24 hours since the initial NAS Attach Reject message.)
 3. Power the device off.
 4. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y3.
 5. Power the device on, and verify that the device successfully attaches to the LTE network within 24 hours.
 6. Power the device off.
24. For release 13 and later UEs, perform the following steps:
 1. Power the device off, and then power the device on.
 2. Monitor the device for 11 hours 45 minutes and verify that it does not attempt to attach on PLMN Y3. (At this point, the device shall have refrained from attaching to PLMN Y3 for 12 hours since the initial NAS Attach Reject message.)
 3. Power the device off.
 4. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y3.
 5. Power the device on, and verify that the device successfully attaches to the LTE network within 12 hours.

6. Power the device off.
Expected Results
<p>An LTE Release 12 or earlier UE configured for timer T₃₂₄₅ does not attempt any further connections within a roaming PLMN for at least 24 hours but no more than 48 hours if it receives a NAS Attach Reject message with cause code 11.</p> <p>An LTE Release 13 or later UE configured for timer T₃₂₄₅ does not attempt any further connections within a roaming PLMN for at least 12 hours but no more than 24 hours if it receives a NAS Attach Reject message with cause code 11.</p>

4.10 PERMANENT ATTACH FAILURES ACROSS POWER CYCLE

VZ_TC_DATA_RETRY_IMS_LESS_1500725

Description
<p>Description</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE attempts multiple power cycles in response to permanent EMM Attach failures.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless <i>Device Requirements LTE Data Retry</i>, Section 3.10 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 3. Ensure DUT has parameter MAXEVENTCOUNTER set to default value of 5 and parameter MAXLOGTIME set to default value of 120. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.

6. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
7. Power cycle the DUT.
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
10. Power cycle the DUT.
11. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
12. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
13. Power cycle the DUT.
14. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
15. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
16. Power cycle the DUT
17. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
18. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
19. Power cycle the DUT.
20. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
21. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
22. Power cycle the DUT
23. Monitor the DUT for 5 minutes and verify that it does not attempt to attach to the LTE network.
24. Power off the DUT.
25. Replace the UICC in the DUT with another valid UICC.
26. Power on the DUT.
27. Verify that the DUT successfully attaches to the LTE network.
28. Power off the DUT.
29. Repeat the test for EMM Cause Codes of 6, 7, and 8.

Expected Results

Once the UE receives more than 5 successive EMM cause code events or power cycles., the UE shall not attempt to attach to the LTE network untill the UICC is replaced.

4.12 UE WITH T₃₂₄₅ TIMER RECEIVES ATTACH REJECT MESSAGE FROM THE NETWORK CODE 14

VZ_TC_DATA_RETRY_IMSLESS_1500732

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE with T₃₂₄₅ timer enabled receives a NAS Attach Reject message with cause code 14 while attempting to attach to the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless LTE Data Retry Device Requirements, <i>Section 3.8</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>These test cases apply to UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y3, and TAI equal to value Z1. The PLMN Y3 shall not be a home PLMN. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 14. Configure the USIM on the DUT such that the Timer T₃₂₄₅ Behaviour parameter in the EFNASConfig file is enabled.

4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message and requests a connection to the Internet PDN using PDN Type IPv4.
6. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 14.
7. Set a timer for 15 minutes and execute the following steps 8 through 22 within the 15 minutes.
8. Verify that the DUT does not attempt to attach to the LTE network after receiving the NAS Attach Reject message.
9. Attempt to initiate a connection to the Admin PDN from the DUT.
10. Verify that the DUT does not attempt to connect to the LTE network.
11. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y3.
12. Verify that the DUT does not attempt to attach to the LTE network on the new eNodeB.
13. Attempt to initiate a connection to the Admin PDN from the DUT.
14. Verify that the DUT does not attempt to connect to the LTE network.
15. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y3.
16. Verify that the DUT does not attempt to attach to the LTE network on the new Tracking Area.
17. Attempt to initiate a connection to the Admin PDN from the DUT.
18. Verify that the DUT does not attempt to connect to the LTE network.
19. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y3. The frequency of the second PLMN may or may not be the same as the first. Configure the test equipment such that the network will allow attachment on PLMN Y2.
20. Verify that the DUT now attempts to attach to the LTE network and is successful.
21. Verify that the DUT connects to the Internet PDN using PDN Type IPv4.
22. Reconfigure the test setup so that the DUT again finds service on the original PLMN (with id equal to value Y3).
23. Verify that the DUT does not attempt to attach on PLMN Y3 for the remaining duration of the 15 minute timer.
24. For release 12 and earlier UEs, perform the following steps:
 1. Monitor the device for 23 hours 45 minutes and verify that it does not attempt to attach on PLMN Y3. (At this point, the device shall have refrained from attaching to PLMN Y3 for 24 hours since the initial NAS Attach Reject message.)

2. Power the device off.
 3. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y₃.
 4. Power the device on and verify that the device successfully attaches to the LTE network.
 5. Verify that the DUT connects to the Internet PDN using PDN Type IPv₄.
 6. Power the device off.
25. For release 13 or later UEs, perform the following steps:
1. Monitor the device for 11 hours 45 minutes and verify that it does not attempt to attach on PLMN Y₃. (At this point, the device shall have refrained from attaching to PLMN Y₃ for 12 hours since the initial NAS Attach Reject message.)
 2. Power the device off.
 3. While the device is powered off, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y₃.
 4. Power the device on and verify that the device successfully attaches to the LTE network.
 5. Verify that the DUT connects to the Internet PDN using PDN Type IPv₄.
 6. Power the device off.

Expected Results

A release 12 or earlier UE configured for timer T₃₂₄₅ does not attempt any further connections within a roaming PLMN for at least 24 hours if it receives a NAS Attach Reject message with cause code 14.

A release 13 or later UE configured for timer T₃₂₄₅ does not attempt any further connections within a roaming PLMN for at least 12 hours if it receives a NAS Attach Reject message with cause code 14.

16. Verify that the DUT does not attempt to attach to the LTE network on the new Tracking Area.
17. Attempt to initiate a connection to the Admin PDN from the DUT.
18. Verify that the DUT does not attempt to connect to the LTE network.
19. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y1. The frequency of the second PLMN may or may not be the same as the first. Configure the test equipment such that the network will allow attachment on PLMN Y2.
20. Verify that the DUT does not attempt to attach to the LTE network.
21. Reconfigure the test setup so that the DUT again finds service on the original PLMN (with id equal to value Y1).
22. Verify that the DUT does not attempt to attach on PLMN Y1 for the remaining duration of the 15 minute timer.
23. For release 12 or earlier UEs, perform the following steps:
 1. While keeping the device power on, remove the device from the test equipment and turn off the test script, and keep the device power on but test script off for 23 hours and 30 minutes.
 2. After 23 hours and 30 minutes have elapsed, reconnect the device to the test equipment and resume the test script.

3. Monitor the device for 15 minutes and verify that it does not attempt to attach on PLMN Y1. (At this point, the device shall have refrained from attaching to PLMN Y1 for 24 hours since the initial NAS Attach Reject message.)
 4. While keeping the device power on, remove the device from the test equipment and turn off the test script, and keep the device power on but test script off for an additional 24 hours.
 5. While the device is powered on and removed from the test equipment, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y1.
 6. After 24 hours has expired, reconnect the device to the test equipment and resume the test script. Verify that the device successfully attaches to the LTE network.
 7. Power the device off.
24. For release 13 or later UEs, perform the following steps:
1. While keeping the device power on, remove the device from the test equipment and turn off the test script, and keep the device power on but test script off for 11 hours and 30 minutes.
 2. After 11 hours and 30 minutes have elapsed, reconnect the device to the test equipment and resume the test script.
 3. Monitor the device for 15 minutes and verify that it does not attempt to attach on PLMN Y1. (At this point, the device shall have refrained from attaching to PLMN Y1 for 12 hours since the initial NAS Attach Reject message.)
 4. While keeping the device power on, remove the device from the test equipment and turn off the test script, and keep the device power on but test script off for an additional 12 hours.
 5. While the device is powered on and removed from the test equipment, configure the test equipment such that the network will allow the UE to attach successfully on PLMN Y1.
 6. After 12 hours has expired, reconnect the device to the test equipment and resume the test script. Verify that the device successfully attaches to the LTE network.
 7. Power the device off.

Expected Results

An LTE Release 12 or earlier UE configured for timer T₃₂₄₅ does not attempt any further connections within a PLMN for at least 24 hours but no more than 48 hours if it receives a NAS Attach Reject message with cause code 8.

An LTE Release 13 or later UE configured for timer T₃₂₄₅ does not attempt any further connections

within a PLMN for at least 12 hours but no more than 24 hours if it receives a NAS Attach Reject message with cause code 8.

Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network. 5. Initiate the test application (see section TEST EQUIPMENT CONFIGURATION) and

- verify that it connects successfully to the Admin PDN. Configure the test application for the application idle state.
6. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
 7. Configure the test equipment so that the network responds to all NAS Service Request messages with a NAS Service Reject message with an EMM Cause Code of 12.
 8. Configure the test application for the application transmitting state with a retransmission timer of 10 seconds.
 9. Verify that the UE sends a NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 12.
 10. Monitor the DUT for 5 minutes and verify that it does not attempt to connect to the LTE network.
 11. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y1. The TAI is still equal to Z1.
 12. Verify that the DUT does not attempt to connect to the LTE network on the new eNodeB.
 13. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different; the PLMN id is still equal to Y1.
 14. Verify that the DUT now attempts to connect to the LTE network and is successful.
 15. Reconfigure the test setup so that the DUT again finds service on the original TAI (with id equal to value Z1).
 16. Verify that the DUT does not attempt to connect on TAI Z1.
 17. Power cycle the DUT.
 18. Verify that the DUT successfully establishes an RRC connection on the eNodeB with TAI equal to Z1 and sends a NAS Attach Request message.
 19. Verify that the DUT attaches to the LTE network successfully.
 20. Initiate the test application (see section 1.5) and verify that it connects successfully to the Admin PDN.
 21. Power the device off.
 22. Repeat the test for EMM Cause Codes of 13 and 15.

Expected Results

UE does not attempt any further connections within a TAI if it receives a NAS Service Reject message with cause codes 12, 13, or 15.

5.3 SERVICE REQUEST FAILS GENERIC THROTTLING ALGORITHM INVOKED VZ_TC_DATA_RETRY_IMSLESS_1500744

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE's generic throttling algorithm is executed as a result of a service request failure.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.4.1.2 and 4.5.2.2</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <p>Release 11 and Earlier UE</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.

5. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
6. Initiate the test application (see *section TEST EQUIPMENT CONFIGURATION*) so that the UE needs to initiate the service procedure for the Admin PDN. Configure the test equipment such that the network does not respond to the NAS Service Requests from the UE.
7. Verify that the UE sends a NAS Service Request to the network.
8. Verify that the network does not respond to the NAS Service Request from the UE.
9. Verify that the UE waits at least T₃₄₁₇ seconds before sending another NAS Service Request. Verify that the network ignores the NAS Service Request.
10. After T₃₄₁₇ expires, verify that the UE sends three more NAS Service Request attempts each separated by T₃₄₁₇ seconds and that the network does not respond to the Service Requests.
11. Verify that the UE does not request the connection over the air for the next 1 minute plus a random time between 0 and 15 seconds.
12. Once the 1+ minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS Service Requests each separated by T₃₄₁₇ seconds and that the network does not respond to the NAS Service Request messages. This is considered Retry #3.
13. Verify that the UE does not request the connection over the air for the next 2 minutes.
14. Once the 2 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS Service Requests each separated by T₃₄₁₇ seconds and that the network does not respond to the NAS Service Request messages. This is considered Retry #4.
15. Verify that the UE does not request the connection over the air for the next 8 minutes.
16. Once the 8 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS Service Requests each separated by T₃₄₁₇ seconds and that the network does not respond to the NAS Service Request messages. This is considered Retry #5.
17. Verify that the UE does not request the connection over the air for the next 15 minutes.
18. Once the 15 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS Service Requests each separated by T₃₄₁₇ seconds and that the network does not respond to the NAS Service Request messages. This is considered Retry #6.
19. Verify that the UE does not request the connection over the air for the next 15 minutes.
20. While the fifteen minute throttling timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₂ where Y₂ is not equal to Y₁. PLMN Y₂ shall not be a home PLMN. The frequency of the second PLMN shall be the same as the

first.

21. Verify that the UE sends a NAS Tracking Area Update Request for PLMN Y₂ and connects to the Internet PDN using PDN Type IPv₄.
22. While the fifteen minute throttling timer continues to run, re-configure the network so that the UE again finds service on PLMN Y₁. Verify that the UE does not attempt to connect until the expiration of the original 15 minute timer.
23. Power the device off.

Release 12 and later UE

1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X₁, PLMN id equal to value Y₁, and TAI equal to value Z₁.
2. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs.
3. Power the DUT on and allow it to find LTE service.
4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
5. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
6. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**) so that the UE needs to initiate the service procedure for the Admin PDN. Configure the test equipment such that the network does not respond to the NAS Service Requests from the UE.
7. Verify that the UE sends a NAS Service Request to the network.
8. Verify that the network does not respond to the NAS Service Request from the UE.
9. Verify that the UE waits at least T₃₄₁₇ seconds before sending another NAS Service Request. Verify that the network ignores the NAS Service Request.
10. After T₃₄₁₇ expires, verify that the UE sends three more NAS Service Request attempts each separated by T₃₄₁₇ seconds and that the network does not respond to the Service Requests.
11. Verify that the UE does not request the connection over the air for the next 1 minute plus a random time equal to or greater than 15 seconds.
12. Once the 1+ minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS Service Requests and that the network does not respond to the NAS Service Request messages.

13. Verify that the UE does not request the connection over the air for the next 1 minute plus a random time equal to or greater than 15 seconds.
14. After 1+ minute timer expire, verify that the UE does attempt to connect to the LTE network.
15. Power the device off.

Expected Results

Release 11 and Earlier UE

The UE applies the throttling behavior as defined in sections *GENERIC THROTTLING ALGORITHM* and *Other Abnormal Cases in the UE* of the Verizon Wireless LTE Data Retry Requirements.

Release 12 and later UE

The UE applies the throttling behavior as defined in VZ_REQ_LTEDATARETRY_7780 and VZ_REQ_LTEDATARETRY_40042 Verizon Wireless LTE Data Retry Requirements

5.4 UE RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK

- verify that it connects successfully to the Admin PDN. Configure the test application for the application idle state.
6. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
 7. Configure the test equipment so that the network responds to all NAS Service Request messages with a NAS Service Reject message with an EMM Cause Code of 17.
 8. Configure the test application for the application transmitting state with a retransmission timer of 10 seconds.
 9. Verify that the UE sends a NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 10. Verify that the UE sends a second NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 11. Verify that the UE sends a third NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 12. Verify that the UE does not request the connection over the air for the next 1 minute plus a random time between 0 and 15 seconds.
 13. Once the 1+ minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends a fourth NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 14. Verify that the UE does not request the connection over the air for the next 2 minutes.
 15. Once the 2 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends a fifth NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 16. Verify that the UE does not request the connection over the air for the next 8 minutes.
 17. Once the 8 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends a sixth NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 18. Verify that the UE does not request the connection over the air for the next 15 minutes.
 19. Once the 15 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends a seventh NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 17.
 20. Verify that the UE does not request the connection over the air for the next 15 minutes.

Expected Results

The UE applies the throttling behavior as defined in sections 3.3 and 4.4.1.2 of the Verizon Wireless LTE Data Retry Requirements.

Patvi15s

5.5 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODES 12, 13, AND 15 VZ_TC_DATA_RETRY_IMS_LESS_1500746

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Tracking Area Update Reject message while attempting a tracking area update with the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.3.4</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. 3. Power the DUT on and allow it to find LTE service. 4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE

- network.
5. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
 6. Configure the test equipment so that the network responds to all NAS Tracking Area Update Request messages with a NAS Tracking Area Update Reject message with an EMM Cause Code of 12.
 7. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z2 where Z2 is not equal to Z1, and Z2 is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y1.
 8. Verify that the UE sends a NAS Tracking Area Update Request message and that the network responds with a NAS Tracking Area Update Reject message in which the EMM Cause Code is set to 12.
 9. Monitor the DUT for 5 minutes and verify that it does not attempt to connect to the LTE network.
 10. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y1. The TAI is still equal to Z2.
 11. Verify that the DUT does not attempt to connect to the LTE network on the new eNodeB.
 12. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with TAI equal to value Z3 where Z3 is not equal to Z1 or Z2. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y1.
 13. Verify that the DUT behaves as follows depending on EMM cause code received in Step 8:
 - If EMM cause code is 12, DUT now attempts to attach to the LTE network and is successful.
 - If EMM cause code is 13 or 15, DUT sends Tracking Area Update Request message and is successful.
 14. Reconfigure the test setup so that the DUT again finds service on tracking area Z2.
 15. Verify that the DUT does not attempt to connect on TAI Z2.
 16. Power cycle the DUT.
 17. Verify that the DUT successfully establishes an RRC connection on the eNodeB with TAI equal to Z2 and sends a NAS Attach Request message.
 18. Verify that the DUT attaches to the LTE network successfully.
 19. Power the device off.
 20. Repeat the test for EMM Cause Codes of 13 and 15.

Expected Results

UE does not attempt any further connections within a TAI if it receives a NAS Tracking Area Update Reject message with cause codes 12, 13, or 15.

5.6 TRACKING AREA UPDATE REQUEST FAILS TRACKING AREA UPDATE ATTEMPT COUNTER REACHES MAX VALUE

VZ_TC_DATA_RETRY_IMS_LESS_1500734

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE's tracking area update attempt counter reaches its maximum value.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.3.4</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that T3402 is set to 12 minutes. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE

network.

5. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
6. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z2 where Z2 is not equal to Z1, and Z2 is not on the UE's list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y1. Configure the test equipment such that the network does not respond to RACH attempts from the UE (i.e., ignores the random access preamble).
7. Verify that the UE sends a series of RACH attempts for T300 seconds.
8. Verify that the network does not respond to the RACH attempts from the UE.
9. Verify that the UE waits at least T3411 seconds before sending another series of RACH attempts. Verify that the network ignores the random access procedure.
10. After the random access procedure fails, verify that the UE waits at least T3411 seconds before sending another series of RACH attempts. Re-configure the network emulator such that the network emulator responds to the RACH and allows the random access procedure to complete. Re-configure the network emulator to respond to the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime value of 10 seconds.
11. Verify that the DUT sends an RRCConnectionRequest message to the LTE network and that the network responds to the RRCConnectionRequest message with an RRCConnectionReject message with a waitTime value of 10 seconds. [Note: the device tracking area updating attempt counter should *not* be incremented upon reception of an RRCConnectionReject message.]
12. After the RRCConnectionRequest fails, verify that the UE waits at least 10 seconds before sending another series of RACH attempts.
13. Re-configure the network emulator to allow the RACH and RRC connection setup to succeed. Configure the test equipment such that the network does not respond to NAS Tracking Area Update Request messages.
14. Verify that after the expiration of T3430 + T3411, the UE sends a NAS Tracking Area Update Request message to the network.
15. Verify that the network does not respond to the NAS Tracking Area Update Request message.
16. Verify that after the expiration of T3430 + T3411, the UE sends a NAS Tracking Area Update Request message to the network.
17. Verify that the network does not respond to the NAS Tracking Area Update Request message.
18. After the NAS Tracking Area Update Request (fifth attempt) fails, verify that the UE does not send a NAS Tracking Area Update Request message for at least T3402 minutes.
19. Verify that the UE sends a second cluster of five NAS Tracking Area Update Request

messages with each individual message separated by at least T_{3411} seconds. After that, verify that the UE sends no additional NAS Tracking Area Update Request messages for at least T_{3402} minutes.

20. Verify that the UE sends a third cluster of NAS Tracking Area Update Request messages with each individual message separated by at least T_{3411} seconds. After that, verify that the UE sends no additional NAS Tracking Area Update Request messages for at least T_{3402} minutes.
21. While the T_{3402} timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y_2 where Y_2 is not equal to Y_1 . The frequency of the second PLMN shall be the same as the first.
22. Verify that the UE sends a NAS Tracking Area Update Request to the network without waiting for the T_{3402} timer to expire.
23. Re-configure the network so that the UE again finds service on PLMN Y_1 . Verify that the UE does not attempt to attach to the network until the expiration of the original T_{3402} timer. **Note** : If UE support LTE only RAT , then UE may attempt to attach to the Network without waiting for the original T_{3402} timer to expire.
24. Power the device off.

Expected Results

The UE is limited to groups of 5 TAU attempts where each request is separated by T_{3411} seconds and each group is separated by T_{3402} minutes.

5.7 UE RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODE 17 VZ_TC_DATA_RETRY_IMS_LESS_1500735

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Tracking Area Update Reject message while attempting a tracking area update with the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.4.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test system such that T3402 is set to 12 minutes. 2. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. 3. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

4. Power the DUT on and allow it to find LTE service
5. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept.
6. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
7. Configure the test equipment so that the network responds to all NAS Tracking Area Update Request messages with a NAS Tracking Area Update Reject message with an EMM Cause Code of 17.
8. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z2 where Z2 is not equal to Z1, and Z2 is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y1.
9. Verify that the UE sends a NAS Tracking Area Update Request message and that the network responds with a NAS Tracking Area Update Reject message in which the EMM Cause Code is set to 17.
10. Verify that after T3411 seconds, the UE sends a second NAS Tracking Area Update Request message and that the network responds with a NAS Tracking Area Update Reject message in which the EMM Cause Code is set to 17.
11. Verify that the UE attempts a Tracking Area Update 3 more times with each attempt separated by at least T3411 seconds.
12. After the fifth attempt fails, verify the UE does not send a Tracking Area Update Request while T3402 is running.

Expected Results

After receiving the NAS Tracking Area Update Reject message, the UE attempts a Tracking Area Update 4 more times with each attempt separated by at least T3411 seconds. After the fifth attempt fails, the next tracking area update attempt does not occur for at least T3402 minutes.

5.8 UE WITH T₃₃₄₆ TIMER SUPPORT RECEIVES SERVICE REJECT MESSAGE FROM THE NETWORK CODE 22 VZ_TC_DATA_RETRY_IMSLESS_1500736

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Service Reject message while attempting to re-connect to the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.4.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies only to UEs with T₃₃₄₆ timer support designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network. Initiate the test application (see <i>section TEST EQUIPMENT CONFIGURATION</i>) and

verify that it connects successfully to the Admin PDN. Configure the test application for the application idle state.

6. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
7. Configure the test equipment so that the network responds to all NAS Service Request messages with a NAS Service Reject message with an EMM Cause Code of 22 and a T₃₃₄₆ Timer value of 15 minutes.
8. Configure the test application for the application transmitting state with a retransmission timer of 10 seconds.
9. Verify that the UE sends a NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 22.
10. Verify that the UE does not re-issue a Service Request while the T₃₃₄₆ timer is running.
11. While the T₃₃₄₆ timer is running, power cycle the UE.
12. Verify that the UE does not issue a Service Request.
13. While the T₃₃₄₆ timer is running, re-configure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z₂ where Z₂ is not equal to Z₁, and Z₂ is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y₁.
14. Verify that the UE does not issue a Service Request.
15. While the T₃₃₄₆ timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₂ where Y₂ is not equal to Y₁. PLMN Y₂ shall not be a home PLMN. The frequency of the second PLMN shall be the same as the first. T₃₃₄₆ shall not be running in this second PLMN.
16. Verify that the UE successfully attaches to the LTE network and connects to the Internet PDN using PDN Type IPv4.
17. While the T₃₃₄₆ timer is running, re-configure the test setup so that the DUT again finds service on PLMN Y₁.
18. Verify that the UE issues a service request without waiting for T₃₃₄₆ to expire.
19. Power the UE off.

Expected Results

After receiving the NAS Service Reject message, the UE waits T₃₃₄₆ minutes before issuing its next Service Request in that PLMN. If the UE enters a new PLMN, it shall stop timer T₃₃₄₆ before issuing a Service Request in that PLMN.

5.10 UE WITH T₃₃₄₆ TIMER SUPPORT RECEIVES TRACKING AREA UPDATE REJECT MESSAGE FROM THE NETWORK CODE 22

VZ_TC_DATA_RETRY_IMS_LESS_1500738

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Tracking Area Update Reject message while attempting a tracking area update with the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.3.4.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3, Release 10 or later</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies only to UEs with T₃₃₄₆ timer support that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X₁, PLMN id equal to value Y₁, and TAI equal to value Z₁. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE

network.

5. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
6. Configure the test equipment so that the network responds to all NAS Tracking Area Update Request messages with a NAS Tracking Area Update Reject message with an EMM Cause Code of 22 and a T₃₃₄₆ Timer value of 15 minutes.
7. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z₂ where Z₂ is not equal to Z₁, and Z₂ is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y₁.
8. Verify that the UE sends a NAS Tracking Area Update Request message and that the network responds with a NAS Tracking Area Update Reject message in which the EMM Cause Code is set to 22.
9. Verify that the UE does not re-issue a Tracking Area Update Request while the T₃₃₄₆ timer is running.
10. While the T₃₃₄₆ timer is running, power cycle the UE.
11. Verify that the UE does not issue a Tracking Area Update Request.
12. While the T₃₃₄₆ timer is running, re-configure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z₃ where Z₃ is not equal to Z₁ or Z₂, and Z₃ is not on the UEs list of tracking areas. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y₁.
13. Verify that the UE does not issue a Tracking Area Update Request.
14. While the T₃₃₄₆ timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₂ where Y₂ is not equal to Y₁. PLMN Y₂ shall not be a home PLMN. The frequency of the second PLMN shall be the same as the first. T₃₃₄₆ shall not be running in this second PLMN.
15. Verify that the UE successfully attaches to the LTE network and connects to the Internet PDN using PDN Type IPv4.
16. While the T₃₃₄₆ timer is running, re-configure the test setup so that the DUT again finds service on PLMN Y₁.
17. Verify that the UE issues a Tracking Area Update Request without waiting for T₃₃₄₆ to expire.

Expected Results

After receiving the NAS Tracking Area Update Reject message, the UE waits T₃₃₄₆ minutes before its next TAU attempt in that PLMN. If the UE enters a new PLMN, it shall stop timer T₃₃₄₆ before issuing a TAU attempt in that PLMN.

<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach and connect to PDNs. 3. Ensure DUT has parameter MAXEVENTCOUNTER set to default value of 5 and parameter MAXLOGTIME set to default value of 120. 4. Power the DUT on and allow it to find LTE service. 5. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.

6. Initiate the test application (see section 1.5) and verify that it connects successfully to the Admin PDN. Configure the test application for the application idle state.
7. Force the DUT to the RRC IDLE state by having the network transmit an RRCConnectionRelease message.
8. Configure the test equipment so that the network responds to all NAS Service Request messages with a NAS Service Reject message with an EMM Cause Code of 3.
9. Configure the test application for the application transmitting state with a retransmission timer of 10 seconds.
10. Verify that the UE sends a NAS Service Request message and that the network responds with a NAS Service Reject message in which the EMM Cause Code is set to 3.
11. Re-configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 3.
12. Power cycle the DUT.
13. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
14. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
15. Power cycle the DUT.
16. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
17. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
18. Power cycle the DUT.
19. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
20. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
21. Power cycle the DUT.
22. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
23. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
24. Power cycle the DUT.
25. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
26. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 3.
27. Power cycle the DUT

28. Monitor the DUT for 5 minutes and verify that it does not attempt to connect to the LTE network.
29. Power off the DUT.
30. Replace the UICC in the DUT with another valid UICC.
31. Power on the DUT.
32. Verify that the DUT successfully attaches to the LTE network.
33. Power off the DUT.
34. Repeat the test for EMM Cause Codes of 6, 7, and 8.

Expected Results

Once the UE receives more than **5** successive EMM cause code events or power cycles., the UE shall not attempt to attach to the LTE network untill the UICC is replaced.

6.1 NETWORK FAILS TO REFRESH THE IPV6 ADDRESS FOR THE INTERNET PDN, NO IPV4 ADDRESS ASSIGNED VZ_TC_DATA_RETRY_IMSLESS_1500755

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to refresh an IPv6 address to the UE.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE 3GPP Network Access, Section 4.1.8</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach and connect to the Internet PDN and the Internet PDN will respond to the UE's initial request for an IPv6 Router Solicitation message but will not respond to all subsequent requests. Configure the test equipment so that the network will assign an IPv6 Interface ID but it will not assign an IPv4 address when the device connects to the Internet PDN. Verify that the DUT has an Internet application that will attempt to connect as soon as the

- DUT is powered on and an application that will connect to the Admin PDN.
5. Power the DUT on and allow it to find LTE service.
 6. Verify that the DUT successfully establishes an RRC connection, attaches to the network, and connects to the Internet PDN.
 7. Verify that the UE sends IPv6 Router Solicitation messages to the network and that the network responds. Configure the network so that the Router Advertisement message uses a "Valid Lifetime" of 5 minutes, a "Preferred Lifetime" of 5 minutes, and a "Router Lifetime" of 4 minutes.
 8. Initiate the application that connects to the Admin PDN and verify that it connects successfully.
 9. Verify that the device sends a Router Solicitation message to the Internet PDN after between 3 and 4 minutes have elapsed from the receipt of the first Router Advertisement message.
 10. Verify that the network does not respond to the Router Solicitation messages.
 11. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 12. Verify that the UE disconnects from the Internet PDN.
 13. Verify that the device connects to the Internet PDN within one minute. Verify that the network does not assign an IPv4 address during the connection.
 14. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 15. Verify that the UE disconnects from the Internet PDN. This is considered Retry #1.
 16. Verify that the device connects to the Internet PDN within one minute. Verify that the network does not assign an IPv4 address during the connection.
 17. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 18. Verify that the UE disconnects from the Internet PDN. This is considered Retry #2.
 19. Verify that the device does not connect to the Internet PDN for at least 1 minute. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
 20. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.

21. Verify that the UE disconnects from the Internet PDN. This is considered Retry #3.
22. Verify that the device does not connect to the Internet PDN for at least 2 minutes. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
23. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
24. Verify that the UE disconnects from the Internet PDN. This is considered Retry #4.
25. Verify that the device does not connect to the Internet PDN for at least 8 minutes. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
26. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
27. Verify that the UE disconnects from the Internet PDN. This is considered Retry #5.
28. Verify that the device does not connect to the Internet PDN for at least 15 minutes. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
29. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
30. Verify that the UE disconnects from the Internet PDN. This is considered Retry #6.
31. Verify that the device does not connect to the Internet PDN for at least 15 minutes. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
32. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
33. Verify that the UE disconnects from the Internet PDN. This is considered Retry #7.

Expected Results

UE follows the required retry algorithm when the PDN does not refresh the IPv6 address of the

Internet PDN.

Patvi15s

6.2 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE ADMIN PDN- INITIAL CONNECTION, NO IPV4 ADDRESS ASSIGNED

VZ_TC_DATA_RETRY_IMS_LESS_1500757

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to assign an IPv6 address to the UE for a non-IMS PDN initial connection where no IPv4 address is assigned.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.6</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach and connect to the Admin PDN but the Admin PDN will not respond to the UEs request for an IPv6 Router Solicitation message. 3. Configure the test equipment so that the network will assign an IPv6 Interface ID but it will

- not assign an IPv4 address when the device connects to the Admin PDN.
4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
6. Initiate the test application (see section ***section TEST EQUIPMENT CONFIGURATION***) and configure it for the application transmitting state with a retransmission timer set to 10 seconds.
7. Verify that the device connects to the Admin PDN. Verify that the network does not assign an IPv4 address during the connection.
8. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
9. Verify that the UE disconnects from the Admin PDN.
10. Verify that the device connects to the Admin PDN within one minute. Verify that the network does not assign an IPv4 address during the connection.
11. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
12. Verify that the UE disconnects from the Admin PDN. This is considered Retry #1.
13. Verify that the device connects to the Admin PDN within one minute. Verify that the network does not assign an IPv4 address during the connection.
14. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
15. Verify that the UE disconnects from the Admin PDN. This is considered Retry #2.
16. Verify that the device does not connect to the Admin PDN for at least [1 minute minus (MAX_RTR_SOLICITATION)(RTR_SOLICITATION_INTERVAL) seconds (i.e., 12 seconds)]. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
17. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
18. Verify that the UE disconnects from the Admin PDN. This is considered Retry #3.
19. Verify that the device does not connect to the Admin PDN for at least [2 minutes minus 12

- seconds]. Once the UE does connect again to the Internet PDN, verify that the network does not assign an IPv4 address during the connection.
20. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 21. Verify that the UE disconnects from the Admin PDN. This is considered Retry #4.
 22. Verify that the device does not connect to the Admin PDN for at least [8 minutes minus 12 seconds]. Once the UE does connect again to the Admin PDN, verify that the network does not assign an IPv4 address during the connection.
 23. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 24. Verify that the UE disconnects from the Admin PDN. This is considered Retry #5.
 25. Verify that the device does not connect to the Admin PDN for at least [15 minutes minus 12 seconds]. Once the UE does connect again to the Admin PDN, verify that the network does not assign an IPv4 address during the connection.
 26. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 27. Verify that the UE disconnects from the Admin PDN. This is considered Retry #6.
 28. Verify that the device does not connect to the Admin PDN for at least [15 minutes minus 12 seconds]. Once the UE does connect again to the Admin PDN, verify that the network does not assign an IPv4 address during the connection.
 29. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 30. Verify that the UE disconnects from the Admin PDN. This is considered Retry #7.

Expected Results

UE follows the required retry algorithm when the PDN does not assign an IPv6 address for the Admin PDN.

6.3 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE ADMIN PDN- INITIAL CONNECTION, IPV4 ADDRESS ASSIGNED

VZ_TC_DATA_RETRY_IMS_LESS_1500758

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to assign an IPv6 address to the UE for the Admin PDN initial connection where an IPv4 address is assigned.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.6</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach and connect to the Admin PDN but the Admin PDN will not respond to the UEs request for an IPv6 Router Solicitation message.

3. Configure the test equipment so that the network will assign an IPv6 address and an IPv4 address when the device connects to the Admin PDN.
4. Power the DUT on and allow it to find LTE service.
5. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
6. Initiate the test application (see *section TEST EQUIPMENT CONFIGURATION*) and configure it for the application transmitting state with a retransmission timer set to 10 seconds.
7. Verify that the device connects to the Admin PDN. Verify that the network assigns an IPv4 and IPv6 IID address during the connection.
8. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Admin PDN and that the network does not respond. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
9. Verify that the UE stays connected to the Admin PDN and uses the IPv4 address for all communication with the Admin PDN.

Expected Results

UE follows the required retry algorithm when the PDN does not assign an IPv6 address for the Admin PDN.

6.4 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR THE INTERNET PDN- SUBSEQUENT ATTACHMENT

VZ_TC_DATA_RETRY_IMS_LESS_1500759

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS PDN Connectivity Reject message while attempting to re-connect to the Internet PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.5.2.1.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment to allow the device to attach and connect to all PDNs. 3. Verify that the DUT has an Internet application that will attempt to connect as soon as the DUT is powered on. 4. Power the DUT on and allow it to find LTE service. 5. Verify that the DUT successfully establishes an RRC connection, attaches to the network,

- and connects to the Internet PDN.
6. Initiate the test application (see *section TEST EQUIPMENT CONFIGURATION*) and verify that it connects successfully to the Admin PDN. Configure the test application for the application idle state.
7. Allow the RRC connection to go idle.
8. Configure the test equipment to send a NAS "Deactivate EPS Bearer Context Request" message to disconnect the Internet PDN.
9. Verify that the UE disconnects from the Internet PDN.
10. Configure the test equipment such that the network will send a NAS PDN Connectivity Reject message with cause code 26 when the UE attempts to connect to the Internet PDN. Note that the T3396 Value IE is not included in the PDN Connectivity Reject message.
11. Initiate the Internet test application (see *section TEST EQUIPMENT CONFIGURATION*) for the application transmitting state with a retransmission timer of 10 seconds..
12. Verify that the UE immediately attempts to re-connect to the Internet PDN on behalf of the test application by sending a NAS PDN Connectivity Request message.
13. Verify that the network sends a NAS PDN Connectivity Reject message with cause code 26 when the UE attempts to connect to the Internet PDN.
14. Verify that upon the next request of the test application the UE attempts to re-connect to the Internet PDN without delay by sending a NAS PDN Connectivity Request message and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
15. Verify that upon the next request of the test application the UE attempts a third time to connect to the Internet PDN without delay by sending a NAS PDN Connectivity Request message and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
16. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 1 minute plus a random time between 0 and 15 seconds.
17. Once the 1+ minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
18. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 2 minutes.
19. Once the 2 minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
20. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 8 minutes.

21. Once the 8 minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
22. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 15 minutes.
23. Once the 15 minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
24. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 15 minutes.
25. While the fifteen minute throttling timer is running, re-configure the network so that the network accepts the PDN Connectivity Request for the Internet PDN.
26. Once the fifteen minute timer expires, verify that the UE successfully connects to the Internet PDN.
27. Repeat the test for ESM Cause Codes 30, 31, 34, 38, 95-101, and 111.

Expected Results

UE follows the data retry algorithm described in the document "Verizon Wireless LTE Data Retry" when it receives a NAS PDN Connectivity Reject message for the Internet PDN.

VZ_TC_DATA_RETRY_IMSLESS_1500760

Description
Definition This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS PDN Connectivity Reject message while attempting to connect to a PDN on the LTE network.
Traceability <ul style="list-style-type: none">Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.5.1</i>3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i>3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i>
Applicability This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
Test Procedure <ol style="list-style-type: none">Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1.Configure the test equipment such that the network will allow the UE to attach to the LTE network but the network will send a NAS PDN Connectivity Reject message with cause code 26 when the UE attempts to connect to the Admin PDN. Note that the T3396 Value IE is not included in the PDN Connectivity Reject message. Configure the DUT so that, for the Admin PDN, the MAX_CONN parameter is set to 2 and the MAX_CONN_T

- parameter is set to 300 seconds.
3. Power the DUT on and allow it to find LTE service.
 4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
 5. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**). Configure the test application for the application transmitting state with the retransmission timer set to 8 seconds.
 6. Verify that the network responds to a PDN Connectivity Request message from the UE by sending a PDN Connectivity Reject message with an ESM cause code of 26.
 7. Verify that the UE sends a NAS PDN Connectivity Request without delay at the request of the test application and that the network again responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #1.
 8. Verify that the UE sends another NAS PDN Connectivity Request without delay at the request of the test application and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #2.
 9. Verify that the test application requests a connection every 10 seconds and that the UE does not request the connection over the air for the next 1 minute plus a random time between 0 and 15 seconds.
 10. Once the 1+ minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #3.
 11. Verify that the test application requests a connection every 10 seconds and that the UE does not request the connection over the air for the next 2 minutes.
 12. Once the 2 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #4.
 13. Verify that the test application requests a connection every 10 seconds and that the UE does not request the connection over the air for the next 8 minutes.
 14. Once the 8 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #5.
 15. Verify that the test application requests a connection every 10 seconds and that the UE does not request the connection over the air for the next 15 minutes.
 16. Once the 15 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN

Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This is considered Retry #6.

17. Verify that the test application requests a connection every 10 seconds and that the UE does not request the connection over the air for the next 15 minutes.
18. Once the 15 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 26. This considered Retry #7.
19. Repeat the test for ESM cause codes 26, 30, 31, 34, 38, 95, 96, 97, 98, 99, 100, 101, and 111.

Expected Results

UE follows the data retry algorithm described in the document "Verizon Wireless LTE Data Retry" when it receives a NAS PDN Connectivity Reject message.

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <p>Release 11 and Earlier UE</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach to the LTE network but the network will send a NAS PDN Connectivity Reject message with cause code 8 when the UE attempts to connect to the Admin PDN. Note that the T3396 Value IE is not included in the PDN Connectivity Reject message. Configure the DUT so that, for the

Admin PDN, the MAX_CONN parameter is set to 2 and the MAX_CONN_T parameter is set to 300 seconds.

3. Power the DUT on and allow it to find LTE service.
4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
5. Initiate the test application (see *section TEST EQUIPMENT CONFIGURATION*). Configure the test application for the application transmitting state with the retransmission timer set to 8 seconds.
6. Verify that the UE sends a NAS PDN Connectivity Request message for the Admin PDN to the LTE network, and that the network responds to the PDN Connectivity Request message from the UE by sending a PDN Connectivity Reject message with an ESM cause code of 8.
7. Verify that the UE sends a second NAS PDN Connectivity Request without delay at the request of the test application and that the network again responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 8.
8. Monitor the DUT for 2 minutes and verify that it does not attempt to send a NAS PDN Connectivity Request to the LTE network.
9. Reconfigure the test setup so that the DUT now finds service on a different eNodeB with cell_id equal to value X2 where X2 is not equal to X1. X1 and X2 are on the same frequency. The PLMN id is still equal to Y1.
10. Verify that the DUT does not attempt to send a NAS PDN Connectivity Request to the LTE network on the new eNodeB.
11. Reconfigure the test setup so that the DUT now finds service on a different Tracking Area with id equal to value Z2 where Z2 is not equal to Z1. Note that only the TAC portion of the TAI will be different. The PLMN id is still equal to Y1.
12. Verify that the DUT does not attempt to send a NAS PDN Connectivity Request to the LTE network on the new tracking area.
13. Reconfigure the test setup so that the DUT now finds service on a different PLMN with id equal to value Y2 where Y2 is not equal to Y1. PLMN Y2 shall not be a home PLMN. The frequency of the second PLMN shall be the same as the first. Configure the test equipment as follows:
 - Configure the test equipment to reject a tracking area update request from the UE with EMM cause value #9.
 - Configure the test equipment such the the new LTE network will send an Attach Reject message with EMM cause code 19 and a PDN Connectivity Reject message with ESM cause code 8 when the UE attempts to attach and connect to the internet PDN.
14. Verify that the UE attempts to connect to PLMN Y2 by sending a tracking area update

- request and that the network rejects the tracking area update request with EMM cause value #9.
15. Verify that the DUT successfully establishes an RRC connection and attempts to attach to the new network and connect to the internet PDN using PDN Type IPv4. Verify that the network responds with an Attach Reject message with EMM cause code 19 and a PDN Connectivity Reject message with ESM cause code 8.
 16. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2.
 17. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
 18. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3.
 19. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 26.
 20. Monitor the DUT and verify that it does not attempt to attach to the LTE network for at least T₃₄₀₂ minutes.
 21. After T₃₄₀₂ expires, verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
 22. Re-configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X₁, PLMN id equal to value Y₁, and TAI equal to value Z₁.
 23. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
 24. Monitor the DUT for 2 minutes and verify that it does not attempt to send a NAS PDN Connectivity Request to the LTE network.
 25. Power cycle the DUT.
 26. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
 27. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**). Configure the test application for the application transmitting state with the retransmission timer set to 8 seconds.
 28. Verify that the UE sends a NAS PDN Connectivity Request message for the Admin PDN to the LTE network.
 29. Power the device off.
 30. Repeat the test for ESM Cause Codes 29, 32, 33, and 112.

Release 12 and later UE

1. Configure the test equipment such that the network will allow the UE to attach to the LTE network but the network will send a NAS PDN Connectivity Reject message with cause code 8 including back off timer value set to 0 when the UE attempts to connect to the Admin PDN.
2. Power the DUT on and allow it to find LTE service.
3. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
4. Verify that the UE sends a NAS PDN Connectivity Request message for the Admin PDN to the LTE network, and that the network responds to the PDN Connectivity Request message from the UE by sending a PDN Connectivity Reject message with an ESM cause code of 8 including back off timer value set to 0.
5. Verify that the UE sends a second NAS PDN Connectivity Request without delay and that the network again responds with a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to 8 and back off timer value set to 0.
6. Re-configure the test equipment such that the network will send a NAS PDN Connectivity Reject message including back off timer value set to 2 min with cause code 8 when the UE attempts to connect to the Admin PDN.
7. Verify that the UE sends a third NAS PDN Connectivity Request without delay at the request of the test application and that the network again responds with a NAS PDN Connectivity Reject message including back off timer value (2 min) with ESM Cause Code is set to 8.
8. Monitor the DUT for 2 minutes and verify that it does not attempt to send a NAS PDN Connectivity Request to the LTE network.
9. Re-configure the test equipment such that the network will send a NAS PDN Connectivity Reject message with ESM cause code 8 where back off timer value is not present when the UE attempts to connect to the Admin PDN.
10. Verify that the UE sends a fourth NAS PDN Connectivity Request after expiration of back off timer (2 min) at the request of the test application and that the network again responds with a NAS PDN Connectivity Reject message with ESM Cause Code is set to 8 where back off timer value is not present.
11. Monitor DUT for 10 min and verify that the DUT does not attempt to connect to ADMIN PDN.
12. Power off the device.
13. Power on the device and verify that DUT attempt to send a NAS PDN Connectivity Request for ADMIN PDN to the LTE network.

14. Repeat the test for ESM Cause Codes 27,29, 32, 33 and 112.

Expected Results

Release 11 and Earlier UE

The UE ceases to send NAS PDN Connectivity Requests for an Admin PDN after receiving two consecutive NAS PDN Connectivity Reject messages with the same ESM cause code where the ESM Cause Code is 8, 27, 29, 32, 33, and 112 until the UE enters a new PLMN or is power cycled.

Release 12 and later UE

The UE ceases to send NAS PDN Connectivity Request for ADMIN PDN after NAS PDN Connectivity Reject messages with back off timer value is not present where the ESM Cause code is 8,27,29,32,33 and 112. until UE is power cycled.

VZ_TC_DATA_RETRY_IMS_LESS_1500747

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS PDN Connectivity Reject message while attempting to connect to the Internet PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.5.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

3. Power the DUT on and allow it to find LTE service
4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE..
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network will respond to attach attempts by sending a NAS Attach Reject message with an EMM Cause Code equal to 19 and the T₃₄₀₂ timer set to 4 minutes. Configure the test equipment such that the network will respond to a piggybacked PDN connectivity request by sending a NAS PDN Connectivity Reject message with an ESM Cause Code equal to 8. Note that the T₃₃₉₆ Value IE is not included in the PDN Connectivity Reject message.
8. Verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
9. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.
10. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
11. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.
12. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
13. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.
14. Monitor the DUT and verify that it does not attempt to attach to the LTE network for at least T₃₄₀₂ minutes (4 minutes).
15. After T₃₄₀₂ expires, verify that the DUT successfully establishes an RRC connection and sends a NAS Attach Request message.
16. Verify that the network responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.

17. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #2. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
18. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.
19. Verify that the UE waits at least T₃₄₁₁ seconds before attempting to attach again. The next attempt is considered attempt #3. Verify that the Request Type IE in the PDN Connectivity Request message is set to "Initial Request." Verify that the PDN Type is set to the class 3 (Internet) PDN.
20. Verify that the network again responds with a NAS Attach Reject message in which the EMM Cause Code is set to a value of 19 and a NAS PDN Connectivity Reject message in which the ESM Cause Code is set to a value of 8.
21. Monitor the DUT and verify that it does not attempt to attach to the LTE network for at least T₃₄₀₂ minutes (4 minutes).
22. While the T₃₄₀₂ timer is running, re-configure the network so that the network accepts the attach request and PDN connectivity request.
23. After T₃₄₀₂ expires, verify that the DUT attempts to attach to the LTE network using the Internet PDN, and that the network accepts the requests.
24. Power the device off.
25. Repeat the test for ESM Cause Codes 27, 29, 32, 33, and 112.

Expected Results

UE sets the attach attempt counter to 5 after receiving 3 NAS Attach Reject messages with EMM Cause Code of 19. The first three attachment attempts are separated by T₃₄₁₁ seconds. The next attempt does not occur for at least T₃₄₀₂ minutes (4 minutes).

6.8 NETWORK FAILS TO RESPOND TO PDN CONNECTIVITY REQUEST

VZ_TC_DATA_RETRY_IMS_LESS_1500748

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to respond to a NAS PDN Connectivity Request message while attempting to connect to the Admin PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE Data Retry, Section 4.5.1</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach to the LTE network. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. Verify that the device under test (DUT) has an Internet application that will attempt to connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

4. Power the DUT on and allow it to find LTE service
5. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
6. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
7. Verify that the DUT detaches from the LTE network.
8. Configure the test equipment such that the network does not respond to the PDN Connectivity Request for the Admin PDN. Configure the DUT so that, for the Admin PDN, the MAX_CONN parameter is set to 2 and the MAX_CONN_T parameter is set to 300 seconds.
9. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
10. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**) so that the UE needs to make a PDN connection request for the Admin PDN.
11. Verify that the UE sends a NAS PDN Connectivity Request and that the network does not respond to the NAS PDN Connectivity Request message.
12. Verify that the UE waits at least T₃₄₈₂ seconds before sending another NAS PDN Connectivity Request and that the network does not respond to the NAS PDN Connectivity Request message.
13. Verify that the UE makes three more NAS PDN Connectivity requests, each separated by at least T₃₄₈₂ seconds, and that the network does not respond to the NAS PDN Connectivity Request messages.
14. Verify that the UE does not request the connection over the air for the next 1 minute plus a random time between 0 and 15 seconds.
15. Once the 1+ minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another NAS PDN Connectivity Request and that the network does not respond to the NAS PDN Connectivity Request message.
16. Verify that the UE waits at least T₃₄₈₂ seconds before sending another NAS PDN Connectivity Request and that the network does not respond to the NAS PDN Connectivity Request message.
17. Verify that the UE makes three more NAS PDN Connectivity requests, each separated by at least T₃₄₈₂ seconds, and that the network does not respond to the NAS PDN Connectivity Request messages.
18. Verify that the UE does not request the connection over the air for the next 2 minutes.
19. Once the 2 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS PDN Connectivity Requests, each separated by at least T₃₄₈₂ seconds, and that the

- network does not respond to the NAS PDN Connectivity Request messages.
20. Verify that the UE does not request the connection over the air for the next 8 minutes.
 21. Once the 8 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS PDN Connectivity Requests, each separated by at least T₃₄₈₂ seconds, and that the network does not respond to the NAS PDN Connectivity Request messages.
 22. Verify that the UE does not request the connection over the air for the next 15 minutes.
 23. Once the 15 minute timer expires, verify that the UE attempts to connect upon the next request of the test application with no delay. Verify that the UE sends another series of five NAS PDN Connectivity Requests, each separated by at least T₃₄₈₂ seconds, and that the network does not respond to the NAS PDN Connectivity Request messages.
 24. Verify that the UE does not request the connection over the air for the next 15 minutes.
 25. Power the device off.

Expected Results

The UE applies the throttling behavior as defined in *sections GENERIC THROTTLING ALGORITHM* and *Network Does Not Respond to the "PDN CONNECTIVITY REQUEST" message from the UE or the Network Responds with a "PDN CONNECTIVITY REJECT" message with no ESM Cause Code* of the Verizon Wireless LTE Data Retry Requirements.

6.9 NETWORK FAILS TO REFRESH THE IPV6 ADDRESS FOR THE INTERNET PDN, IPV4 ADDRESS ASSIGNED

VZ_TC_DATA_RETRY_IMS_LESS_1500749

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to refresh an IPv6 address to the UE.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, <i>Device Requirements LTE 3GPP Network Access, Section 4.1.8</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach and connect to the Internet PDN and the Internet PDN will respond to the UE's initial request for an IPv6 Router Solicitation message but will not respond to all subsequent requests. Configure the test equipment so that the network will assign an IPv6 Interface ID and an IPv4 address when the device connects to the Internet PDN. Verify that the DUT has an Internet application that will attempt to connect as soon as the

- DUT is powered on and an application that will connect to the Admin PDN.
5. Power the DUT on and allow it to find LTE service.
 6. Verify that the DUT successfully establishes an RRC connection, attaches to the network, and connects to the Internet PDN.
 7. Verify that the UE sends IPv6 Router Solicitation messages to the network and that the network responds. Configure the network so that the Router Advertisement message uses a "Valid Lifetime" of 5 minutes, a "Preferred Lifetime" of 5 minutes, and a "Router Lifetime" of 4 minutes.
 8. Verify that the device sends a Router Solicitation message to the Internet PDN after between 3 and 4 minutes have elapsed from the receipt of the first Router Advertisement message.
 9. Verify that the network does not respond to the Router Solicitation messages. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
 10. Verify that the UE stays connected to the Internet PDN and uses the IPv4 address for all communication with the Internet PDN.

Expected Results

UE follows the required retry algorithm when the PDN does not refresh the IPv6 address of the Internet PDN.

6.10 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE INTERNET PDN ON NETWORK ATTACH, IPV4 ADDRESS ASSIGNED TO INTERNET

VZ_TC_DATA_RETRY_IMSLESS_1500750

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to assign an IPv6 address to the UE.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless LTE Data Retry Device Requirements, <i>Sections 3.6, 4.6.1, and 4.6.2</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Test Procedure
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> 1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. 2. Configure the test equipment such that the network will allow the UE to attach and connect to the Internet PDN but the network will not respond to the UE's IPv6 Router Solicitation messages for the Internet PDN. 3. Configure the test equipment so that the network will assign an IPv6 Interface ID and IPv4

address when the device connects to the Internet PDN.

4. Verify that the DUT has an Internet application that will attempt to connect as soon as the DUT is powered on.
5. Power the DUT on and allow it to find LTE service.
6. Verify that the DUT successfully establishes an RRC connection, attaches to the network, and connects to the Internet PDN.
7. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond.
8. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
9. Verify that the UE stays connected to the Internet PDN and uses the IPv4 address for all communication with the Internet PDN.
10. Re-configure the network to respond to the UE's IPv6 Router Solicitation messages for the Internet PDN.
11. Power cycle the UE.
12. Verify that the UE successfully attaches to the LTE network and connects to the Internet PDN.
13. Power the device off.

Expected Results

When the network does not assign an IPv6 address for the Internet PDN but assigns an IPv4 address, the UE uses the IPv4 address for all communication to the Internet PDN.

6.1.1 NETWORK FAILS TO ASSIGN AN IPV6 ADDRESS FOR THE INTERNET PDN ON NETWORK ATTACH, NO IPV4 ADDRESS ASSIGNED

VZ_TC_DATA_RETRY_IMS_LESS_1500751

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the network fails to assign both an IPv6 address and IPv4 address to the UE for the Internet PDN.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless LTE Data Retry Device Requirements, <i>Section 4.6.2</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> IETF RFC 4861: <i>Neighbor Discovery for IP version 6 (IPv6)</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network sets the T3402 timer to 4 minutes in the Attach Accept message. Verify that the device under test (DUT) has an Internet application that will attempt to

connect to the Internet PDN as soon as the DUT is powered on and finds service on the LTE network.

3. Power the DUT on and allow it to find LTE service
4. Verify that the DUT sends an Attach Request and that the network responds with an Attach Accept with the T₃₄₀₂ timer set to 4 minutes.
5. Configure the test equipment such that the network sends a Detach Request to the DUT with "re-attach required" in the Detach Type IE.
6. Verify that the DUT detaches from the LTE network.
7. Configure the test equipment such that the network will allow the UE to attach and connect to the Internet PDN but the network will not respond to the UE's IPv6 Router Solicitation messages for the Internet PDN.
8. Configure the test equipment so that the network will assign an IPv6 Interface ID but it will not assign an IPv4 address when the device connects to the Internet PDN.
9. Verify that the DUT successfully establishes an RRC connection, attaches to the network, and connects to the Internet PDN.
10. Verify that the UE sends IPv6 Router Solicitation messages to the network for the Internet PDN and that the network does not respond.
11. Verify that the UE does not send more than MAX_RTR_SOLICITATION (3 per RFC 4861) Router Solicitation messages separated by RTR_SOLICITATION_INTERVAL (4) seconds.
12. Verify that the UE detaches from the LTE network. and starts timer T₃₄₀₂.
13. Monitor the UE for 8 minutes and verify that the UE does not initiate attachment attempts before T₃₄₀₂ expires.
14. While T₃₄₀₂ is running, re-configure the network to respond to the UE's IPv6 Router Solicitation messages on the Internet PDN.
15. Upon expiry of timer T₃₄₀₂, verify that the UE re-attaches to the network and connects to the Internet PDN.

Expected Results

When the network does not assign either an IPv6 address or IPv4 address for the Internet PDN, the UE detaches from the LTE network and starts timer T₃₄₀₂. Upon expiry of timer T₃₄₀₂, the UE attempts to re-attach and connect to the Internet PDN.

6.13 UE MAKES EXCESSIVE PDN CONNECTIVITY REQUESTS

VZ_TC_DATA_RETRY_IMS_LESS_1500753

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE makes excessive NAS PDN Connectivity Requests to the Admin PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless LTE Data Retry Device Requirements, <i>Section 4.5.2.4</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network. Test Case 1 applies only to devices capable of determining the time elapsed between switch off and switch on. Test Case 2 applies only to devices that are not capable of determining the time elapsed between switch off and switch on.</p>

Design Steps
Step Name
Step 1 - Test 1
Pre-Conditions
NOTE: This test shall be executed with the device in tethered mode with the AT command interface active.
Procedures
<p>Test Procedure--Test 1</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the DUT so that, for the Admin PDN, the MAX_CONN parameter is set to 2, the

- MAX_CONN_T parameter is set to 300 seconds, and the WAIT_TIME parameter is set to 60 seconds.
2. Configure the test equipment such that the network will allow the UE to attach to the LTE network and connect to the Admin PDN.
 3. Power the DUT on and allow it to find LTE service.
 4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
 5. Send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
 6. Verify that the UE sends a NAS PDN Connectivity Request and successfully connects to the Admin PDN.
 7. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
 8. Verify that the UE disconnects from the Admin PDN.
 9. Wait one minute, then send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
 10. Verify that the UE sends a second NAS PDN Connectivity Request and successfully re-connects to the Admin PDN.
 11. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
 12. Verify that the UE disconnects from the Admin PDN.
 13. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
 14. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
 15. Verify the UE successfully connects to the Admin PDN.
 16. Reconfigure the DUT so that the WAIT_TIME parameter is set to 180 seconds.
 17. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
 18. Verify that the UE disconnects from the Admin PDN.
 19. At 30 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
 20. Verify that the UE waits at least 3 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
 21. Verify the UE successfully connects to the Admin PDN.
 22. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
 23. Verify that the UE disconnects from the Admin PDN.

24. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
25. Verify that the UE waits at least 3 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
26. Verify the UE successfully connects to the Admin PDN.
27. Reconfigure the DUT so that the WAIT_TIME parameter is set to 30 seconds.
28. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
29. Verify that the UE disconnects from the Admin PDN.
30. At 15 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
31. Verify that the UE waits at least 30 seconds before sending another NAS PDN Connectivity Request for the Admin PDN.
32. Verify the UE successfully connects to the Admin PDN.
33. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
34. Verify that the UE disconnects from the Admin PDN.
35. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
36. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
37. While the 15 minute timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₄ where Y₄ is not equal to Y₁. The frequency of the second PLMN shall be the same as the first.
38. Verify that the UE waits until the 15 minute timer has expired before sending another NAS PDN Connectivity Request for the Admin PDN.
39. Verify the UE successfully connects to the Admin PDN.
40. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
41. Verify that the UE disconnects from the Admin PDN.
42. Verify that the UE waits at least 30 seconds before sending another NAS PDN Connectivity Request for the Admin PDN.
43. Verify the UE successfully connects to the Admin PDN.
44. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
45. Verify that the UE disconnects from the Admin PDN.
46. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.

47. After 10 minutes of the 15 minute timer have elapsed, power off the UE for 5 minutes.
48. After 5 minutes have elapsed, power on the UE.
49. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
50. Send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
51. Verify that the UE sends a NAS PDN Connectivity Request within 5 minutes and successfully connects to the Admin PDN.
52. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
53. Verify that the UE disconnects from the Admin PDN.
54. Wait one minute, then send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
55. Verify that the UE sends a second NAS PDN Connectivity Request and successfully re-connects to the Admin PDN.
56. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
57. Verify that the UE disconnects from the Admin PDN.
58. At 30 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
59. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
60. Verify the UE successfully connects to the Admin PDN.
61. Power the device off.

Expected Results

The UE applies the throttling behavior as defined in *section UE Makes Excessive PDN Connection Requests to the Network* of the Verizon Wireless LTE Data Retry Requirements.

Design Steps

Step Name

Step 2 - Test 2

Pre-Conditions

NOTE: This test shall be executed with the device in tethered mode with the AT command interface active.

Procedures

Test Procedure--Test 2

1. Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X₁, PLMN id equal to value Y₁, and TAI equal to value Z₁. Configure the DUT so that, for the Admin PDN, the MAX_CONN parameter is set to 2, the MAX_CONN_T parameter is set to 300 seconds, and the WAIT_TIME parameter is set to 60 seconds.
2. Configure the test equipment such that the network will allow the UE to attach to the LTE network and connect to the Admin PDN.
3. Power the DUT on and allow it to find LTE service.
4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
5. Send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
6. Verify that the UE sends a NAS PDN Connectivity Request and successfully connects to the Admin PDN.
7. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
8. Verify that the UE disconnects from the Admin PDN.
9. Wait one minute, then send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
10. Verify that the UE sends a second NAS PDN Connectivity Request and successfully re-connects to the Admin PDN.
11. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
12. Verify that the UE disconnects from the Admin PDN.
13. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
14. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
15. Verify the UE successfully connects to the Admin PDN.
16. Reconfigure the DUT so that the WAIT_TIME parameter is set to 180 seconds.
17. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
18. Verify that the UE disconnects from the Admin PDN.

- 19.
20. At 30 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
21. Verify that the UE waits at least 3 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
22. Verify the UE successfully connects to the Admin PDN.
23. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
24. Verify that the UE disconnects from the Admin PDN.
25. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
26. Verify that the UE waits at least 2 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
27. Verify the UE successfully connects to the Admin PDN.
28. Reconfigure the DUT so that the WAIT_TIME parameter is set to 30 seconds.
29. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
30. Verify that the UE disconnects from the Admin PDN.
- 31.
32. At 15 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
33. Verify that the UE waits at least 30 seconds before sending another NAS PDN Connectivity Request for the Admin PDN.
34. Verify the UE successfully connects to the Admin PDN.
35. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
36. Verify that the UE disconnects from the Admin PDN.
37. At one minute intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
38. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
39. While the 15 minute timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y4 where Y4 is not equal to Y1. The frequency of the second PLMN shall be the same as the first.
40. Verify that the UE waits until the 15 minute timer has expired before sending another NAS PDN Connectivity Request for the Admin PDN.
41. Verify the UE successfully connects to the Admin PDN.
42. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the

Admin PDN.

43. Verify that the UE disconnects from the Admin PDN.
44. Verify that the UE waits at least 30 seconds before sending another NAS PDN Connectivity Request for the Admin PDN.
45. Verify the UE successfully connects to the Admin PDN.
46. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
47. Verify that the UE disconnects from the Admin PDN.
48. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
49. After 5 minutes have elapsed since Step 45), power off the UE for 5 minutes.
50. After 5 minutes have elapsed, power on the UE.
51. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
52. Send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
53. Verify that the UE waits at least 10 minutes from power on before sending another NAS PDN Connectivity Request for the Admin PDN.
54. Verify that the UE successfully connects to the Admin PDN.
55. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
56. Verify that the UE disconnects from the Admin PDN.
57. Wait one minute, then send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
58. Verify that the UE sends a second NAS PDN Connectivity Request and successfully re-connects to the Admin PDN.
59. Send the AT test command to deactivate the PDP context (+CGACT) on the DUT for the Admin PDN.
60. Verify that the UE disconnects from the Admin PDN.
61. At 30 second intervals, send the AT test command to define a PDP context (+CGACT) on the DUT for the Admin PDN.
62. Verify that the UE waits at least 15 minutes before sending another NAS PDN Connectivity Request for the Admin PDN.
63. Verify the UE successfully connects to the Admin PDN.
64. Power the device off.

Expected Results

The UE applies the throttling behavior as defined in *section UE Makes Excessive PDN Connection Requests to the Network* of the Verizon Wireless LTE Data Retry Requirements.

VZ_TC_DATA_RETRY_IMS_LESS_1500754

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS Detach Request message with re-attach required while throttling connection attempts to the Internet PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless Device Requirements LTE Data Retry, <i>Section 4.5.2.3</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment to allow the device to attach and connect to all PDNs. Verify that the DUT has an Internet application that will attempt to connect as soon as the DUT is powered on. Power the DUT on and allow it to find LTE service. Verify that the DUT successfully establishes an RRC connection, attaches to the network, and connects to the Internet PDN. Initiate the test application (see <i>section TEST EQUIPMENT CONFIGURATION</i>) and verify that it connects successfully to the Admin PDN. Configure the test application for the

- application idle state.
7. Allow the RRC connection to go idle.
 8. Configure the test equipment to send a NAS "Deactivate EPS Bearer Context Request" message to disconnect the Internet PDN.
 9. Verify that the UE disconnects from the Internet PDN.
 10. Configure the test equipment such that the network will send a NAS PDN Connectivity Reject message with cause code 26 when the UE attempts to connect to the Internet PDN. Note that the T3396 Value IE is not included in the PDN Connectivity Reject message.
 11. Verify that the UE immediately attempts to re-connect to the Internet PDN by sending a NAS PDN Connectivity Request message.
 12. Verify that the network sends a NAS PDN Connectivity Reject message with cause code 26 when the UE attempts to connect to the Internet PDN.
 13. Verify that the UE immediately attempts to re-connect to the Internet PDN by sending a NAS PDN Connectivity Request message and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
 14. Verify that the UE immediately attempts a third time to connect to the Internet PDN by sending a NAS PDN Connectivity Request message and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
 15. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 1 minute plus a random time between 0 and 15 seconds.
 16. Once the 1+ minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
 17. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 2 minutes.
 18. Once the 2 minute timer expires, verify that the UE sends another NAS PDN Connectivity Request and that the network responds with a NAS PDN Connectivity Reject message with cause code 26.
 19. Verify that the UE does not attempt a NAS PDN Connectivity Request for the Internet PDN for the next 8 minutes.
 20. While the 8 minute timer is running, re-configure the test equipment to send a NAS Detach Request with "re-attach required." Configure the test equipment to accept connection requests to the Internet PDN.
 21. Verify that the UE immediately attempts to attach to the LTE network and connect to the Internet PDN.
 22. Verify that the UE successfully attaches to the LTE network and connects to the Internet PDN.

Expected Results

UE follows the data retry algorithm described in the document "Verizon Wireless LTE Data Retry" when it receives a NAS Detach Request message with "re-attach required" while throttling connection attempts for the Internet PDN.

Patvi15s

6.15 UE RECEIVES PDN CONNECTIVITY REJECT MESSAGE FROM THE NETWORK FOR ADMIN PDN CODES 26 AND 27 WITH T₃₃₉₆ TIMER SET

VZ_TC_DATA_RETRY_IMSLESS_1500756

Description
<p>Definition</p> <p>This test verifies that the UE meets Verizon Wireless requirements for data retry when the UE receives a NAS PDN Connectivity Reject message while attempting to connect to a PDN on the LTE network.</p> <p>Traceability</p> <ul style="list-style-type: none"> Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements, Verizon Wireless LTE Data Retry Device Requirements, <i>Section 1.4.5.2.1.4 VZ_REQ_LTE_DATA_RETRY_7766</i> 3GPP TS 24.301: <i>Non-Access-Stratum (NAS) Protocol for Evolved Packet System (EPS); Stage 3</i> 3GPP TS 36.331: <i>Evolved Universal Terrestrial Radio Access (E-UTRA); Radio Resource Control (RRC); Protocol specification</i> <p>Applicability</p> <p>This test case applies to all UEs that do not support IMS and are designed to operate on the Verizon Wireless LTE 3GPP Band 13 network.</p>

Design Steps
Step Name
Step 1
Pre-Conditions
Procedures
<p>Test Procedure</p> <ol style="list-style-type: none"> Configure the test setup so that the device under test (DUT) finds service on a single eNodeB with cell_id (where "cell_id" refers to the "CellIdentity" parameter that is broadcast in SIB1) equal to value X1, PLMN id equal to value Y1, and TAI equal to value Z1. Configure the test equipment such that the network will allow the UE to attach to the LTE network but the network will send a NAS PDN Connectivity Reject message with cause code 26 and the T₃₃₉₆ Value IE set to 10 minutes when the UE attempts to connect to the Admin PDN. Power the DUT on and allow it to find LTE service.

4. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
5. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**).
Configure the test application for the application transmitting state with the retransmission timer set to 8 seconds.
6. Verify that the UE sends a NAS PDN Connectivity Request message for the Admin PDN, and that the network responds by sending a PDN Connectivity Reject message with an ESM cause code of 26 and a T₃₃₉₆ Value IE set to 10 minutes.
7. Verify that the UE waits 10 minutes before issuing another NAS PDN Connectivity Request for the Admin PDN and that the network responds with a PDN Connectivity Reject message.
8. Verify that the UE does not re-issue a NAS PDN Connectivity Request in PLMN Y₁ for at least 10 minutes while the T₃₃₉₆ timer is running.
9. While the T₃₃₉₆ timer is running, re-configure the network so that the UE finds service on an eNodeB with a PLMN id equal to Y₄ where Y₄ is not equal to Y₁. The frequency of the second PLMN shall be the same as the first. T₃₃₉₆ shall not be running in this second PLMN.
10. Verify that the UE successfully attaches to the LTE network and that the UE issues a PDN Connectivity Request for the Admin PDN upon request of the test application .
11. While the T₃₃₉₆ timer is running, re-configure the test setup so that the DUT again finds service on PLMN Y₁.
12. Verify that the UE successfully attaches to the LTE network but that the UE waits until the 10 minute T₃₃₉₆ timer expires before issuing a PDN Connectivity Request for the Admin PDN.
13. Verify that the network responds with a PDN Connectivity Reject message.
14. While the T₃₃₉₆ timer is running, power cycle the UE.
15. Verify that the DUT successfully establishes an RRC connection and attaches to the LTE network.
16. Initiate the test application (see **section TEST EQUIPMENT CONFIGURATION**).
Configure the test application for the application transmitting state with the retransmission timer set to 8 seconds.
17. Verify that the UE exhibits the correct behavior, according to cause code:
 - o For ESM cause code 26, the UE waits for the T₃₃₉₆ timer to expire before issuing a PDN Connectivity Request for the Admin PDN.
 - o For ESM cause code 27, the UE issues a PDN Connectivity Request for the Admin PDN without waiting for the T₃₃₉₆ timer to expire.
18. Power the device off.

19. Repeat the test for ESM Cause Code 27.

Expected Results

After receiving a NAS PDN Connectivity Reject message with the T₃₃₉₆ Value IE set, the UE ceases to send NAS PDN Connectivity Requests for the Admin PDN for T₃₃₉₆ minutes unless the UE enters a new PLMN or, for cause code 27, is power cycled.
