Introduction

Verizon Wireless requires all devices designed to operate on the Verizon Wireless LTE 3GPP Band 13 network to meet Verizon Wireless-specific RF performance requirements as detailed in the Verizon Wireless LTE 3GPP Band 13 Network Access Device Requirements. This document describes the procedure for verifying that these requirements have been met. Verizon Wireless-specific RF performance requirements and testing are in addition to standard 3GPP LTE RF minimum performance requirements and conformance testing defined in 3GPP TS 36.101: Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) radio transmission and reception and

3GPP TS 36.521-1: Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) conformance specification; Radio transmission and reception; Part 1: conformance testing, respectively.

This publication is part of Verizon Wireless compliance with the FCC's rules for 700 MHz C Block (47 C.F.R. § 27.16), as explained in the FCC's Second Report and Order in WT Docket No. 06-150, "Service Rules for the 698-746, 747-762 and 777-792 MHz Bands" released on August 10, 2007.

In this document, the terms LTE (Long Term Evolution) and E-UTRA (Evolved Universal Terrestrial Radio Access) are considered equivalent.

Test Objectives

The objective of this document is to define the Verizon Wireless-specific RF performance test procedures for devices designed to operate on the Verizon Wireless LTE 3GPP Band 13 network. This document will be used by employees of device manufacturers, test labs, and Verizon Wireless to guide the execution of Verizon Wireless-specific LTE RF performance testing. This document will also be used to define the Verizon Wireless-specific RF performance test procedures for test automation development.

Specifically, this document includes:

- UE transmitter test cases
- UE receiver test cases

Wherever possible, this test plan uses 3GPP standard RF conformance test procedures for LTE as defined in 3GPP TS 36.521-1: Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) conformance specification; Radio transmission and reception; Part 1: conformance testing.

Definition

This test verifies that the UE meets Verizon Wireless requirements for PUCCH over-provisioning. This is a functional test. The current version of this test case is built on the reference sensitivity test in section 7.3 of 3GPP TS 36.521-1: *Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) conformance specification; Radio transmission and reception; Part 1: conformance testing*. Verizon Wireless is also evaluating the option of using a performance test from section 8.2 of 3GPP TS 36.521-1: *Evolved Universal Terrestrial Radio Access (E-UTRA); User Equipment (UE) conformance specification; Radio transmission and reception; Part 1: conformance testing* as the foundation for this test case. As a result, this test case may be adjusted in a future version of this document.
